SAFETY INFORMATION

This service manual is intended for qualified service technicians ; it is not meant for the casual do-it-yourselfer. Qualified technicians have the necessary test equipment and tools, and have been trained to properly and safely repair complex products such as those covered by this manual. Improperly performed repairs can adversely affect the safety and reliability of the product and may void the warranty. If you are not qualified to perform the repair of this product properly and safely, you should not risk trying to do so and refer the repair to a qualified service technician.

WARNING

This product contains lead in solder and certain electrical parts contain chemicals which are known to the state of California to cause cancer, birth defects or other reproductive harm.

Health & Safety Code Section 25249.6 - Proposition 65

NOTICE

(FOR CANADIAN MODEL ONLY)

Fuse symbols  (fast operating fuse) and/or  (slow operating fuse) on PCB indicate that replacement parts must be of identical designation.

REMARQUE

(POUR MODÈLE CANADIEN SEULEMENT)

Les symboles de fusible  (fusible de type rapide) et/ou  (fusible de type lent) sur CCI indiquent que les pièces de remplacement doivent avoir la même désignation.

SAFETY PRECAUTIONS

NOTICE : Comply with all cautions and safety related notes located on or inside the cabinet and on the chassis.

The following precautions should be observed :

1. When service is required, even though the PDP UNIT an isolation transformer should be inserted between the power line and the set in safety before any service is performed.
2. When replacing a chassis in the set, all the protective devices must be put back in place, such as barriers, nonmetallic knobs, adjustment and compartment covershields, isolation resistor-capacitor, etc.
3. When service is required, observe the original lead dress. Extra precaution should be taken to assure correct lead dress in the high voltage circuitry area.
4. Always use the manufacture's replacement components. Especially critical components as indicated on the circuit diagram should not be replaced by other manufacture's. Furthermore where a short circuit has occurred, replace those components that indicate evidence of overheating.
5. Before returning a serviced set to the customer, the service technician must thoroughly test the unit to be certain that it is completely safe to operate without danger of electrical shock, and be sure that no protective device built into the set by the manufacture has become defective, or inadvertently defeated during servicing. Therefore, the following checks should be performed for the continued protection of the customer and servicetechnician.
6. Perform the following precautions against unwanted radiation and rise in internal temperature.
 - Always return the internal wiring to the original styling.
 - Attach parts (Gasket, Ferrite Core, Ground, Rear Cover, Shield Case etc.) surely after disassembly.
7. Perform the following precautions for the PDP panel.
 - When the front case is removed, make sure nothing hits the panel face, panel corner, and panel edge (so that the glass does not break).
 - Make sure that the panel vent does not break. (Check that the cover is attached.)
 - Handle the FPC connected to the panel carefully. Twisting or pulling the FPC when connecting it to the connector will cause it to peel off from the panel.
8. Pay attention to the following.
 - When the front case is removed, infrared ray is radiated and may disturb reception of the remote control unit.
 - Pay extreme caution when the front case and rear panel are removed because this may cause a high risk of disturbance to TVs and radios in the surrounding.

Leakage Current Cold Check

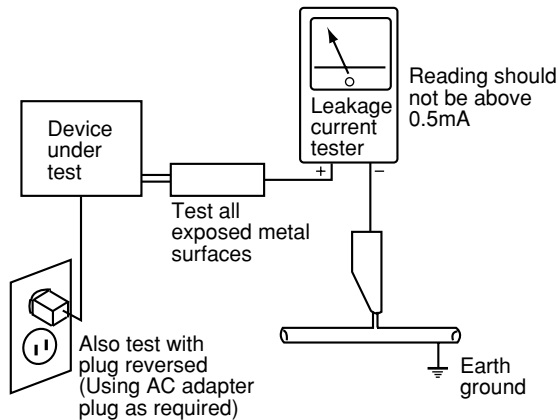

With the AC plug removed from an AC power source, place a jumper across the two plug prongs. Turn the AC power switch on. Using an insulation tester (DC 500V), connect one lead to the jumpered AC plug and touch the other lead to each exposed metal part (input/output terminals, screwheads, metal overlays, control shafts, etc.), particularly any exposed metal part having a return path to the chassis. Exposed metal parts having a return path to the chassis should have a minimum resistor reading of $0.3\text{M}\Omega$ and a maximum resistor reading of $5\text{M}\Omega$. Any resistor value below or above this range indicates an abnormality which requires corrective action. Exposed metal parts not having a return path to the chassis will indicate an open circuit.

Leakage Current Hot Check

Plug the AC line cord directly into an AC power source (do not use an isolation transformer for this check).

Turn the AC power switch on.

Using a "Leakage Current Tester (Simpson Model 229 equivalent)", measure for current from all exposed metal parts of the cabinet (input/output terminals, screwheads, metal overlays, control shaft, etc.), particularly any exposed metal part having a return path to the chassis, to a known earth ground (water pipe, conduit, etc.). Any current measured must not exceed 0.5mA .

AC Leakage Test

PRODUCT SAFETY NOTICE

Many electrical and mechanical parts in PIONEER set have special safety related characteristics. These are often not evident from visual inspection nor the protection afforded by them necessarily can be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in this Service Manual.

Electrical components having such features are identified by marking with a \triangle on the schematics and on the parts list in this Service Manual.

The use of a substitute replacement component which does not have the same safety characteristics as the PIONEER recommended replacement one, shown in the parts list in this Service Manual, may create shock, fire or other hazards.

Product Safety is continuously under review and new instructions are issued from time to time. For the latest information, always consult the current PIONEER Service Manual. A subscription to, or additional copies of, PIONEER Service Manual may be obtained at a nominal charge from PIONEER.

ANY MEASUREMENTS NOT WITHIN THE LIMITS OUTLINED ABOVE ARE INDICATIVE OF A POTENTIAL SHOCK HAZARD AND MUST BE CORRECTED BEFORE RETURNING THE SET TO THE CUSTOMER.

CAUTION

- **Observe the caution matter, without fail**

- The caution matters of  given in the instruction manuals, etc., must be observed, without fail.

- **Do not give shocks and vibration.**

- The panel surface (display plane) of the filter and the PDP module is made of glass. If any shocks or vibration is applied, it may be broken and the scattered glass chips will be a cause of injury.

- **Do not put anything.**

- Do not put anything on the product. Otherwise, this can be a cause of injury as a result of falling down or dropping caused by imbalance.

- **Transportation must be done by enough personnel.**

- The product is heavy. In the case of transportation, unpacking, or packing, more than two persons should do it (four persons for a product of 50-inch or larger) by supporting the top and the bottom of the product.

■ Miscellaneous caution matters

- (1) This product uses highly integrated semiconductor parts. Since these parts are fragile to electrostatic charges, earth bands should be used for handling. The product should be handled where measures have been taken against electrostatic charges.
- (2) For this product, the PDP modules and the PWBs are repaired by replacement in a unit. Therefore, the units of the PDP modules and the PWBs must not be repaired or disassembled. Otherwise, the validity of warranty will be lost.
- (3) If this product is used for the fixed character display or the like as in the case of a character display board, a phenomenon of burning (not warranted) will occur. Burning is a phenomenon that the unevenness in the brightness is caused in the display. In such a case, the brightness in the section where the integrated display time is longer becomes lower than the brightness in another section where the integrated display time is shorter. This phenomenon is in proportion to the integrated display time and the brightness. For this reason, to relieve this difficulty during servicing, do not use any still picture, but use a display by motion pictures of a video or the like. In addition, use "FULL" for the screen mode and avoid using any display by "NORMAL", "TRUE", or MULTI SCREEN like side by side etc. If it is necessary to use only a still picture for unavoidable reasons, use a burning relief function such as "PLE LOCK", "ORBITER", "SCREEN WIPER", etc.
- (4) When a PDP module is operated after a long time of storage, it may encounter a difficulty like a failure in displaying a screen or instability according to the condition of storage. In such a case, the PDP module should be incorporated in the product and aging treatment should be carried out for about two hours (all screen display).
- (5) Sulfides will deteriorate the PDP module and this is a cause of malfunction. Therefore, it is absolutely prohibited to put any vulcanized rubber or a material containing sulfur in the vicinity of the PDP module.
- (6) When taking out a PDP module from the maintenance package box, do it slowly so that the

panel surface does not get any shock or stress.

- (7) If one touches the connector of the flexible cable exposed to the rear side of the PDP module, there is danger of causing a poor contact. As such, it must be handled with utmost care. In addition, the flexible cable is very weak in mechanical strength. Therefore, this cable must not be touched during handling.
- (8) The panel surface of the filter and the PDP module is easy to be hurt. These components should be handled very carefully not to press or rub them with a hard thing. Never put them on a hard thing with the panel surface faced downwards.
- (9) When the panel surface of the PDP module is contaminated, gently wipe off the contaminant with a piece of soft dry cloth. Liquid-state contamination can be removed by lightly pressing it, without rubbing it. If it is difficult to remove the contamination, use a piece of cloth soaked with a neutral detergent. The cloth for wiping off should be clean. Never use the same cloth repeatedly. If a cleansing detergent or water drops should enter the module interior or be attached to the module surface other than the display plane at the time of cleaning, this will give rise to the destruction of the product when the product is energized.
- (10) Refer to the "Instruction Manual" in regard to contamination in the filter and the cabinet.
- (11) When transporting this product, use the packing materials specified in the list of parts. Once used, such packing materials should not be used again.
- (12) This product is composed of a variety of parts, such as those made of materials like glass, metal, plastics, etc., and those like a lithium battery (circuit symbol of the MAIN PWB: BA9501), etc. Therefore, when abandoning this product, this should be done in accordance with the relevant law of the nation or an autonomous body.

CAUTION: Risk of Explosion if Battery is replaced by an Incorrect Type. Dispose of Used Batteries According to above the Instructions.

[Important Check Points for Good Servicing]

In this manual, procedures that must be performed during repairs are marked with the below symbol. Please be sure to confirm and follow these procedures.

1. Product safety

Please conform to product regulations (such as safety and radiation regulations), and maintain a safe servicing environment by following the safety instructions described in this manual.

- ① Use specified parts for repair.

Use genuine parts. Be sure to use important parts for safety.

- ② Do not perform modifications without proper instructions.

Please follow the specified safety methods when modification(addition/change of parts) is required due to interferences such as radio/TV interference and foreign noise.

- ③ Make sure the soldering of repaired locations is properly performed.

When you solder while repairing, please be sure that there are no cold solder and other debris. Soldering should be finished with the proper quantity. (Refer to the example)

- ④ Make sure the screws are tightly fastened.

Please be sure that all screws are fastened, and that there are no loose screws.

- ⑤ Make sure each connectors are correctly inserted.

Please be sure that all connectors are inserted, and that there are no imperfect insertion.

- ⑥ Make sure the wiring cables are set to their original state.

Please replace the wiring and cables to the original state after repairs. In addition, be sure that there are no pinched wires, etc.

- ⑦ Make sure screws and soldering scraps do not remain inside the product.

Please check that neither solder debris nor screws remain inside the product.

- ⑧ There should be no semi-broken wires, scratches, melting, etc. on the coating of the power cord.

Damaged power cords may lead to fire accidents, so please be sure that there are no damages. If you find a damaged power cord, please exchange it with a suitable one.

- ⑨ There should be no spark traces or similar marks on the power plug.

When spark traces or similar marks are found on the power supply plug, please check the connection and advise on secure connections and suitable usage. Please exchange the power cord if necessary.

- ⑩ Safe environment should be secured during servicing.

When you perform repairs, please pay attention to static electricity, furniture, household articles, etc. in order to prevent injuries. Please pay attention to your surroundings and repair safely.

2. Adjustments

To keep the original performance of the products, optimum adjustments and confirmation of characteristics within specification. Adjustments should be performed in accordance with the procedures/instructions described in this manual.

3. Lubricants, Glues, and Replacement parts

Use grease and adhesives that are equal to the specified substance. Make sure the proper amount is applied.

4. Cleaning

For parts that require cleaning, such as optical pickups, tape deck heads, lenses and mirrors used in projection monitors, proper cleaning should be performed to restore their performances.

5. Shipping mode and Shipping screws

To protect products from damages or failures during transit, the shipping mode should be set or the shipping screws should be installed before shipment. Please be sure to follow this method especially if it is specified in this manual.

SPECIFICATIONS

■ PDP-614MX

Screen Size	53.2"(H) × 29.9"(V) inches 1351(H) × 760(V) mm diagonal 61"
Aspect Ratio	16 : 9
Resolution	1365(H) × 768(V) pixels
Signals	
Synchronization Range	Horizontal : 15.5 to 110 kHz (automatic : step scan) Vertical : 50.0 to 120 Hz (automatic : step scan)
Input Signals	RGB, NTSC (3.58/4.43), PAL (B,G,M,N), PAL60, SECAM, HD* ¹ , DVD* ¹ , DTV* ¹
Input Terminals (VIDEO1 and PC1 can also be used as OUTPUT terminals)	
PC	
Visual 1 (Analog)	mini D-sub 15-pin × 1
Visual 2 (Analog)	BNC (R, G, B, H/CS, V) × 1* ²
Visual 3 (Digital)	DVI-D 24-pin × 1* ³

Audio	Stereo RCA × 3 (Selectable)
RS-232C	D-sub 9-pin × 1
Sound output	9W+9W at 6 ohm
Power Supply	AC100-120V 50/60Hz
Current Rating	8.0A (maximum)
Power Consumption	540W (standby 0.9W)
Dimensions	57.9 (W) × 34.7 (H) × 4.7 (D) inches 1470 (W) × 880 (H) × 119(D) mm
Weight	134.5 lbs / 61.0 kg (without stand)
Environmental Considerations	
Operating Temperature	0°C to 40°C / 32°F to 104°F
Other Features	Motion compensated 3D Scan Converter (NTSC, PAL, 480I, 576I, 525I, 625I, 1035I, 1080I), 2-3 pull down Converter (NTSC, 480I, 525I, 1035I, 1080I (60Hz)), 2-2 pull down Converter (PAL, 576I, 625I, NTSC, 480I, 525I), Digital Zoom Function (100-900% Selectable), Video Wall 4-25 multi screen, Self Diagnosis, Image Burn reduction tools (ABL LOCK1~3, INVERSE, WHITE, ORBITER (Auto1,2/Manual), SCREEN WIPER), Color Temperature select (high/mid/low/low, user has 4 memories), Key lock (Except power SW), Auto Picture, Input Skip, Color Detail Adjustment, Low Tone (3 mode), Auto ID, Programmable Timer, Gamma Correction (4 mode), Loop through interface, Plug and play (DDC1, DDC2b, PC3: DDC2b only)

The features and specifications may be subject to change without notice.

*¹ COMPONENT input signals supported on this system

480P (60 Hz)	480I (60 Hz)	525P (60 Hz)
525I (60 Hz)	576P (50 Hz)	576I (50 Hz)
625P (50 Hz)	625I (50 Hz)	720P (60 Hz)
1035I (60 Hz)	1080I (50 Hz)	1080I (60 Hz)

*² The 5-BNC connectors are used as PC2 and COMPONENT2 input. Select one of them under "BNC INPUT".

*³ Compatible with HDCP.

Supported Signals

- 640 × 480P @ 59.94/60Hz
- 1280 × 720P @ 59.94/60Hz
- 1920 × 1080I @ 50Hz
- 720 × 576P @ 50Hz
- 1920 × 1080I @ 59.94/60Hz
- 1440 (720) × 576P @ 50Hz
- 720 × 480P @ 59.94/60Hz
- 1440 (720) × 480I @ 59.94/60Hz

Note: In some cases a signal on the plasma monitor may not be displayed properly. The problem may be an inconsistency with standards from the source equipment (DVD, Set-top box, etc...). If you do experience such a problem please contact your dealer and also the manufacturer of the source equipment.

Supported Signals

- 640×480P @ 59.94/60Hz
- 1280×720P @ 59.94/60Hz
- 1920×1080I @ 59.94/60Hz
- 720×480P @ 59.94/60Hz
- 1440 (720)×480I @ 59.94/60Hz

Note: In some cases a signal on the plasma monitor may not be displayed properly. The problem may be an inconsistency with standards from the source equipment (DVD, Set-top box, etc...). If you do experience such a problem please contact your dealer and also the manufacturer of the source equipment.

TABLE OF SIGNAL SUPPORTED

■ PDP-614MX

Supported resolution

- When the screen size is 4:3, each signal is converted to a 1024 dots×768 lines signal. (Except for *2, 3, 4)
- When the screen size is Dot by Dot, the picture is displayed in the original resolution.
- When the screen size is FULL, each signal is converted to a 1365 dots×768 lines signal. (Except for *3)

- *1 Only when using a graphic accelerator board that is capable of displaying 852×480 .
- *2 This signal is converted to a $1024 \text{ dots} \times 640 \text{ lines}$ signal.
- *3 The picture is displayed in the original resolution.
- *4 The aspect ratio is 5:4. This signal is converted to a $960 \text{ dots} \times 768 \text{ lines}$ signal.
- *5 Normally the RGB select mode suite for the input signals is set automatically. If the picture is not displayed properly, set the RGB mode prepared for the input signals listed in the table above.
- *6 To connect the monitor to Macintosh computer, use the monitor adapter (D-Sub 15-pin) to your computer's video port.
- *7 Other screen sizes (ZOOM and WIDE) are available as well.
- *8 When viewing a moving picture at a vertical frequency greater than 65Hz, the picture may sometimes be unstable (jumpy). If this occurs, please set the refresh rate of the external equipment to 60Hz.
To view 480I@60Hz (480 interlaced lines, 60Hz refresh rate) or 576I@50Hz (567 interlaced lines, 50Hz refresh rate) when sync polarity is "Sync on Green", set "RGB SELECT" to "MOTION".
- *9 CVT standard compliant.

NOTE:

- *While the input signals comply with the resolution listed in the table above, you may have to adjust the position and size of the picture or the fine picture because of errors in synchronization of your computer.*
 - *When a $1280 \text{ dots} \times 1024 \text{ lines}$ signal or $1600 \text{ dots} \times 1200 \text{ lines}$ signal is input to the monitor, the picture will be compressed.*
 - *This monitor has a resolution of $1365 \text{ dots} \times 768 \text{ lines}$. It is recommended that the input signal should be XGA, wide XGA, or equivalent.*
 - *With digital input some signals are not accepted.*
 - *The sync may be disturbed when a nonstandard signal other than the aforementioned is input.*
 - *If you are connecting a composite sync signal, use the HD terminal.*
-

What is HDCP/HDCP technology?

HDCP is an acronym for High-bandwidth Digital Content Protection. High bandwidth Digital Content Protection (HDCP) is a system for preventing illegal copying of video data sent over a Digital Visual Interface (DVI).

If you are unable to view material via the DVI input, this does not necessarily mean the PDP is not functioning properly. With the implementation of HDCP, there may be cases in which certain content is protected with HDCP and might not be displayed due to the decision/intention of the HDCP community (Digital Content Protection, LLC).

■ PRO-1410HD

Supported resolution

- When the screen size is 4:3, each signal is converted to a 1024 dots×768 lines signal. (Except for *2,3,4)
- When the screen size is D BY D, the picture is displayed in the original resolution.
- When the screen size is FULL, each signal is converted to a 1365 dots×768 lines signal. (Except for *3)

PANEL FACILITIES

■ PDP-614MX

Rear View/ Terminal Board

A AC IN

Connect the included power cord here.

B EXT SPEAKER L and R

Connect speakers (optional) here. Maintain the correct polarity. Connect the \oplus (positive) speaker wire to the \oplus EXT SPEAKER terminal and the \ominus (negative) speaker wire to the \ominus EXT SPEAKER terminal on both LEFT and RIGHT channels.

Please refer to your speaker's owner's manual.

C VIDEO1, 2, 3 (BNC, RCA, S-Video)

Connect VCR's, DVD's or Video Cameras, etc. here. VIDEO1 can be used for Input or Output.

D AUDIO1, AUDIO2, AUDIO3

These are audio input terminals.

The input is selectable. Set which video image to allot them from the SOUND menu screen.

E COMPONENT1

Connect DVD's, High Definition or Laser Discs, etc. here.

F PC2/COMPONENT2

PC2: You can connect an analog RGB signal and the synchronization signal.

COMPONENT2: You can connect DVDs, High Definition sources, Laser Discs, etc. here.

This input can be set for use with an RGB or component source.

G PC1 (mini D-Sub 15pin)

Connect an analog RGB signal from a computer, etc. here. This input can be used for Input or Output.

H PC3 (DVI 24pin)

Connect a digital signal (TMDS) from a source with a DVI output.

I RS-232C

Never connect any component to this connector without first consulting your Pioneer installation technician.

This connector is used for plasma display setup adjustments.

J REMOTE IN

Connect the remote cable* to the remote control's remote jack to obtain wired remote control.

K REMOTE OUT

Connect the remote cable* to the REMOTE IN jack of the other display monitor to obtain wired remote control.

* The 1/8 Stereo Mini cable must be purchased separately.

Remote Control

1 POWER ON/STANDBY

Switches the power on/standby.
(This does not operate when STANDBY/ON indicator of the main unit is off.)

2 RGB/PC

Press this button to select RGB/PC as the source.
RGB/PC can also be selected using the INPUT/EXIT button on the monitor.

3 COMPONENT

Press this button to select COMPONENT as the source.
COMPONENT can also be selected using the INPUT/EXIT button on the monitor.

4 VIDEO

Press this button to select VIDEO as the source.

→ VIDEO1 → VIDEO2 → VIDEO3

VIDEO can also be selected using the INPUT/EXIT button on the monitor.

5 MENU/SET

Press this button to access the OSD controls.
Press this button during the display of the main menu to go to the sub menu.

6 CURSOR (▲/▼/◀/▶)

Use these buttons to select items or settings and to adjust settings.

7 EXIT

Press this button to exit the OSD controls in the main menu. Press this button during the display of the sub menu to return to the previous menu.

8 POINT ZOOM

Press this button to display the pointer.

9 ZOOM (+/-)

Enlarges or reduces the image.

10 VOLUME (+/-)

Adjusts the sound volume.

11 MUTING

Mutes the sound.

12 SCREEN SIZE

Automatically detects the signal and sets the aspect ratio.
SCREEN SIZE button is not active for all signals.

13 DISPLAY

Displays the source settings on the screen.

14 OFF TIMER

Activates the off timer for the unit.

15 AUTO SET UP

Press this button to adjust PHASE, CLOCK, Position, and Contrast automatically, or to switch the screen size to ZOOM mode automatically with the superimposed caption displayed fully only when the picture contains dark areas above and below the picture.

16 ID NO. SET

Set the ID number in the remote control. The remote control can then be used only for a display with the same ID number. When several displays are used together they can be controlled individually.

17 CLEAR

Clears the number set by the ID NO. SET button.

18 Remote control signal transmitter

Transmits the remote control signals.

19 Remote Jack

Insert the plug of the remote cable (The 1/8 Stereo Mini cable) here when using the supplied remote control in the wired condition.

■ PRO-1410HD

Front View

- ① **Power (⏻)**
Turns the monitor's power on and off.
- ② **Remote sensor window**
Receives the signals from the remote control.
- ③ **STANDBY/ON indicator**
When the power is on Lights green.
When the power is in the standby mode ... Lights red.
- ④ **INPUT/EXIT**
Switches the input.
The available inputs depend on the setting of "BNC INPUT" and "RGB SELECT".
Functions as the EXIT buttons in the On-Screen Display (OSD) mode.
- ⑤ **< and >**
Functions as the CURSOR (◀/▶) buttons in the On-Screen Display (OSD) mode.
- ⑥ **VOLUME ∨ and ∧**
Adjusts the volume. Functions as the CURSOR (▲/▼) buttons in the On-Screen Display (OSD) mode.
- ⑦ **MENU/SET**
Sets the On-Screen Display (OSD) mode and displays the main menu.

WARNING

The Power on/off switch does not disconnect the plasma display completely from the supply mains.

Rear View/ Terminal Board

A AC IN

Connect the included power cord here.

B EXT SPEAKER L and R

Connect speakers (optional) here. Maintain the correct polarity. Connect the \oplus (positive) speaker wire to the \oplus EXT SPEAKER terminal and the \ominus (negative) speaker wire to the \ominus EXT SPEAKER terminal on both LEFT and RIGHT channels. Please refer to your speaker's owner's manual.

C VIDEO1, 2, 3 (BNC, RCA, S-Video)

Connect VCR's, DVD's or Video Cameras, etc. here.

D AUDIO1, AUDIO2, AUDIO3

These are audio input terminals. The input is selectable. Set which video image to allot them from the SOUND menu screen.

E COMPONENT 1

Connect DVD's, High Definition or Laser Discs, etc. here.

F PC2/ COMPONENT2

PC2: You can connect an analog RGB signal and the synchronization signal.

COMPONENT2: You can connect DVDs, High Definition sources, Laser Discs, etc. here.

This input can be set for use with an RGB or component source.

G PC1 (D-Sub)

Connect an analog RGB signal from a computer, etc. here.

H HDMI

Connect a digital signal from a source with a HDMI output.

I RS-232C (D-Sub)

Never connect any component to this connector without first consulting your Pioneer installation technician.

This connector is used for plasma display setup adjustments.

HDMI, the HDMI logo and High-Definition Multimedia Interface are trademarks or registered trademarks of HDMI Licensing LLC.

CONTRAST OF MISCELLANEOUS PARTS

- NOTES: ● Parts marked by "NSP" are generally unavailable because they are not in our Master Spare Parts List.
 ● The  mark found on some component parts indicates the importance of the safety factor of the part. Therefore, when replacing, be sure to use parts of identical designation.
 ● Screws adjacent to ▼ mark on product are used for disassembly.
 ● For the applying amount of lubricants or glue, follow the instructions in this manual.
 (In the case of no amount instructions, apply as you think it appropriate.)

HOW TO DIAGNOSE THE PDP MODULE (PDP-NP61C2MF01)

1. List of tools required for repair
2. Points of failure diagnosis for a Board Assy (PKG)
3. Replacement method of a Board Assy (PKG)
and notes on replacement
4. Adjustments after replacement of parts in the module
5. Operation check

1. List of tools required for repair

- a) Phillips screwdriver : For detaching/reattaching PKGs
- b) Antistatic wrist strap :
To be used when electronic components, such as PKGs, are to be handled
- c) Signal generator (PC, etc.) : For voltage adjustment and display check
- d) Power : For voltage adjustment and display check
- f) Tester : For cable check, voltage adjustment, etc.
- g) Cushion : To be used when the PKGs are to be replaced

Note: Be sure to wear a wrist strap when you detach/reattach PKGs (Board Assy) to protect electronic components from being damaged by electrostatic charges.

2. Points of failure diagnosis for a Board Assy (PKG)

The fuses and/or fusible resistors shown in the photos below may be blown by electric surges caused by a failure. In such a case, replace the corresponding PKG.

Failure diagnosis of the Scanning PKG

Failure diagnosis of the Power HIC on the Scanning PKG

Failure diagnosis of the Scanning IC

Check with a tester the resistance value between any pins indicated as NEGA and POSI of the connector in the photos below. If a positive and a negative pin of the connector on the Scanning Relay PKGs are short-circuited and remains short-circuited even after the connectors on the Scanning PKG and Scanning Relay PKG are disconnected, the Scanning IC on the Scanning Relay PKG is in failure.

Failure diagnosis of the Common PKG

Failure diagnosis of the Power HIC on the Common PKG

Note: A and D are ground.

Failure diagnosis of the Data HIC

Failure symptom: The image in any block of the screen is not displayed.

Check with a tester between Pin 5 or 6 (Vd line of Data IC) and ground of each Signal Relay PKG.

Failure diagnosis of the Digital PKG

Chip fuse (FU701) at the upper-right corner of the digital PKG

3. Replacement method for a Board Assy (PKG) and notes on replacement

Preparation

Place a cushion on the workbench and set the module to be repaired on it.

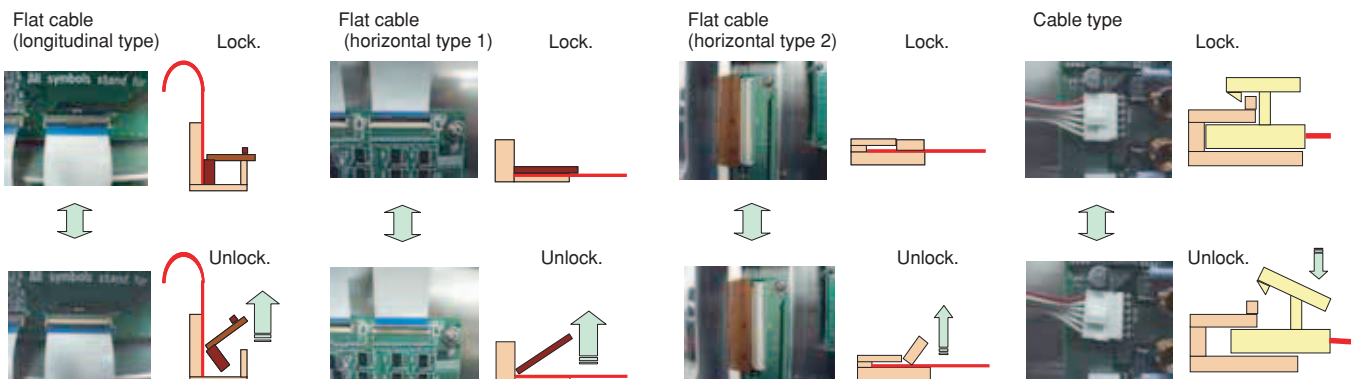

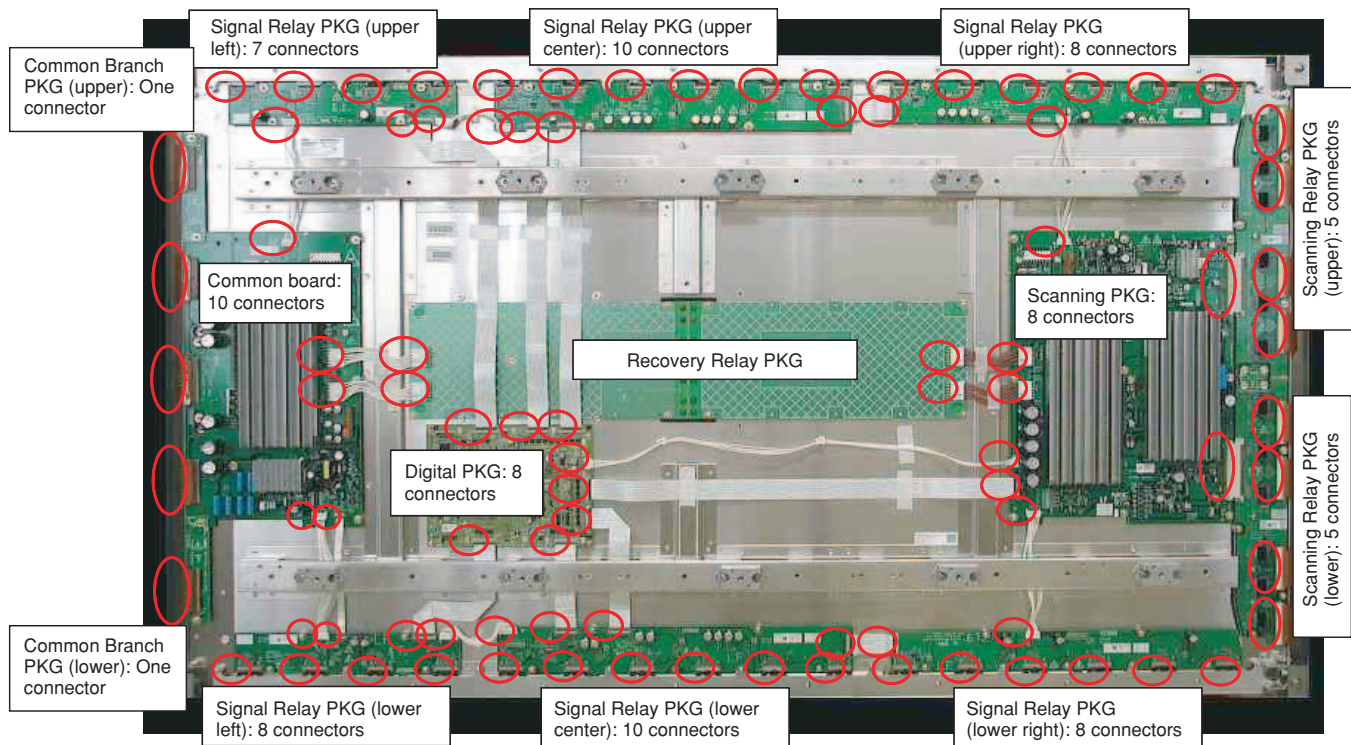

Note: With the glass surface facing downward, be sure that the entire glass surface is against the cushion.

Disconnection of connectors and cables

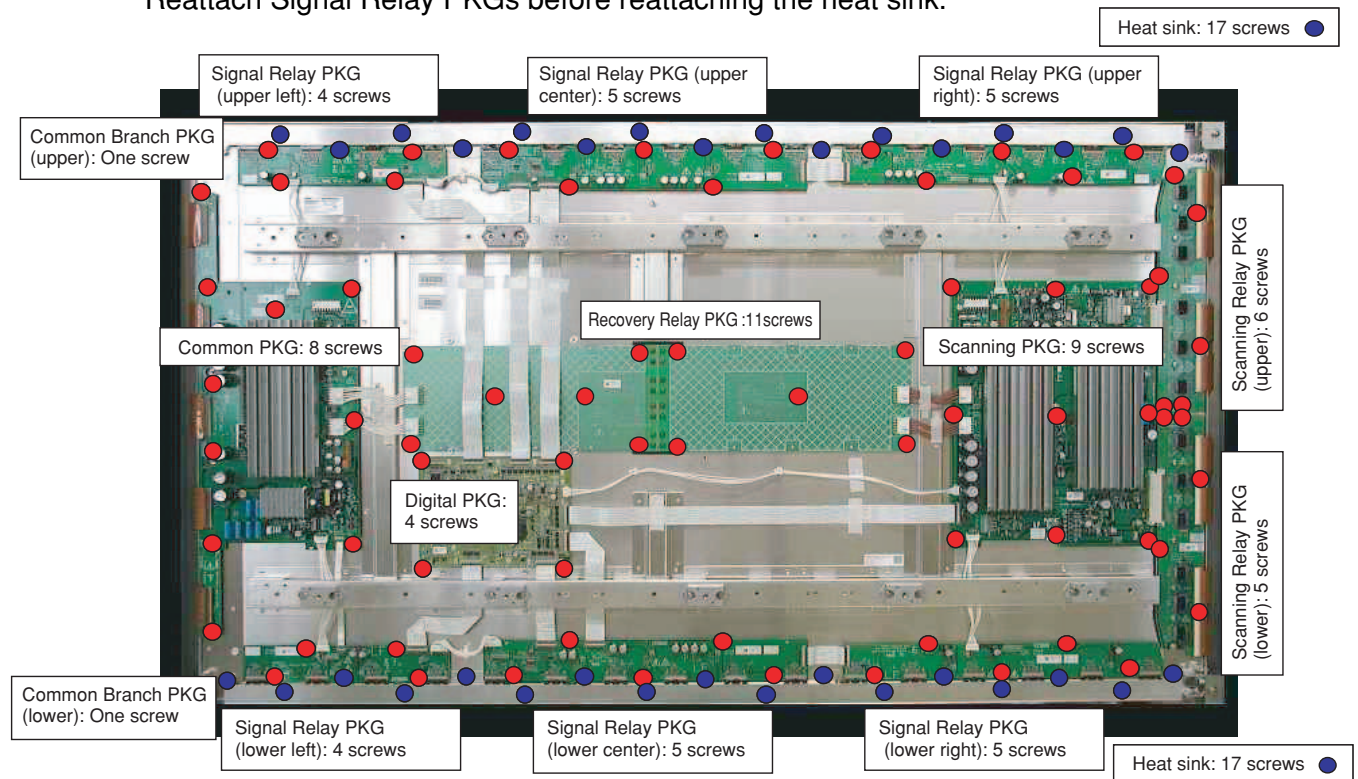

Disconnect all the connectors on the PKG to be repaired.

(When a Signal Relay PKG is to be removed, remove the heat sink beforehand.)

How to remove/reattach the Board Assy (PKGs)

- Notes:
- Be sure not to drop a screwdriver or screw on a PKG or a cable.
 - When removing/reattaching a screw, be sure not to leave any tiny metal shavings, because they may cause a failure.
 - Before removing Signal Relay PKGs, remove the heat sink.
 - Be sure not to apply any stress to a PKG, connector, or cable when reattaching them.
 - Reattach Signal Relay PKGs before reattaching the heat sink.

Confirmation of connector connection

Check whether or not the connectors indicated by circles are correctly connected.

Confirmation of connector connection and locking statuses

○: OK ✕: NG

Between the Signal Relay PKG (photo) and Digital PKG

Between the Signal Relay PKG and Digital PKG (photo)

Between the panel and Common PKG (photo)

Between the Scanning PKG (photo) and Recovery Relay PKG

Between the Signal Relay PKG and Scanning PKG (photo)

Between the Scanning Relay PKG (photo) and panel

Between the Scanning PKG (photo) and Signal Relay PKG (photo)

4. Adjustments after replacement of parts in the module

After the module has been reassembled, adjust the panel-drive voltages as indicated below:
Check Vbw, Vsw, and Vp voltages (values specific for each panel) indicated on the drive-voltage label.

Drive-voltage label	Vbw	Vsw	Vp
(s185.0 / d65.0)	115.2	209.9	199.8

311200062			

Example

Vbw : 115.2V
Vsw : 209.9V
Vp : 199.8V

Vsw adjustment inside the Common PKG

Points to measure: Voltage between TP10 and GND (chassis GND) on the Common PKG
Adjustment method: Adjust VR101 so that the Vsw value of TP10 becomes in the range of ± 0.5 V of the Vsw value indicated on the drive-voltage label.

Vp adjustment inside the Scanning PKG

Points to measure: Voltage between TP32 and GND (chassis GND) on the Scanning PKG

Adjustment method: Adjust VR1 so that the Vp value of TP32 becomes in the range of ± 1.5 V of the Vp value indicated on the drive-voltage label.

Vbw adjustment inside the Scanning PKG

Points to measure: Voltage between TP34 and GND (chassis GND) on the Scanning PKG

Adjustment method: Adjust VR2 so that the Vbw value of TP34 becomes in the range of ± 0.5 V of the Vbw value indicated on the drive-voltage label.

5. Operation check

After replacing the module or parts inside the module, perform aging for 30 minutes or more while displaying a fully white screen.

After that, check the screen by displaying a fully red, fully green, and fully blue screen, color bars, and gray scale.

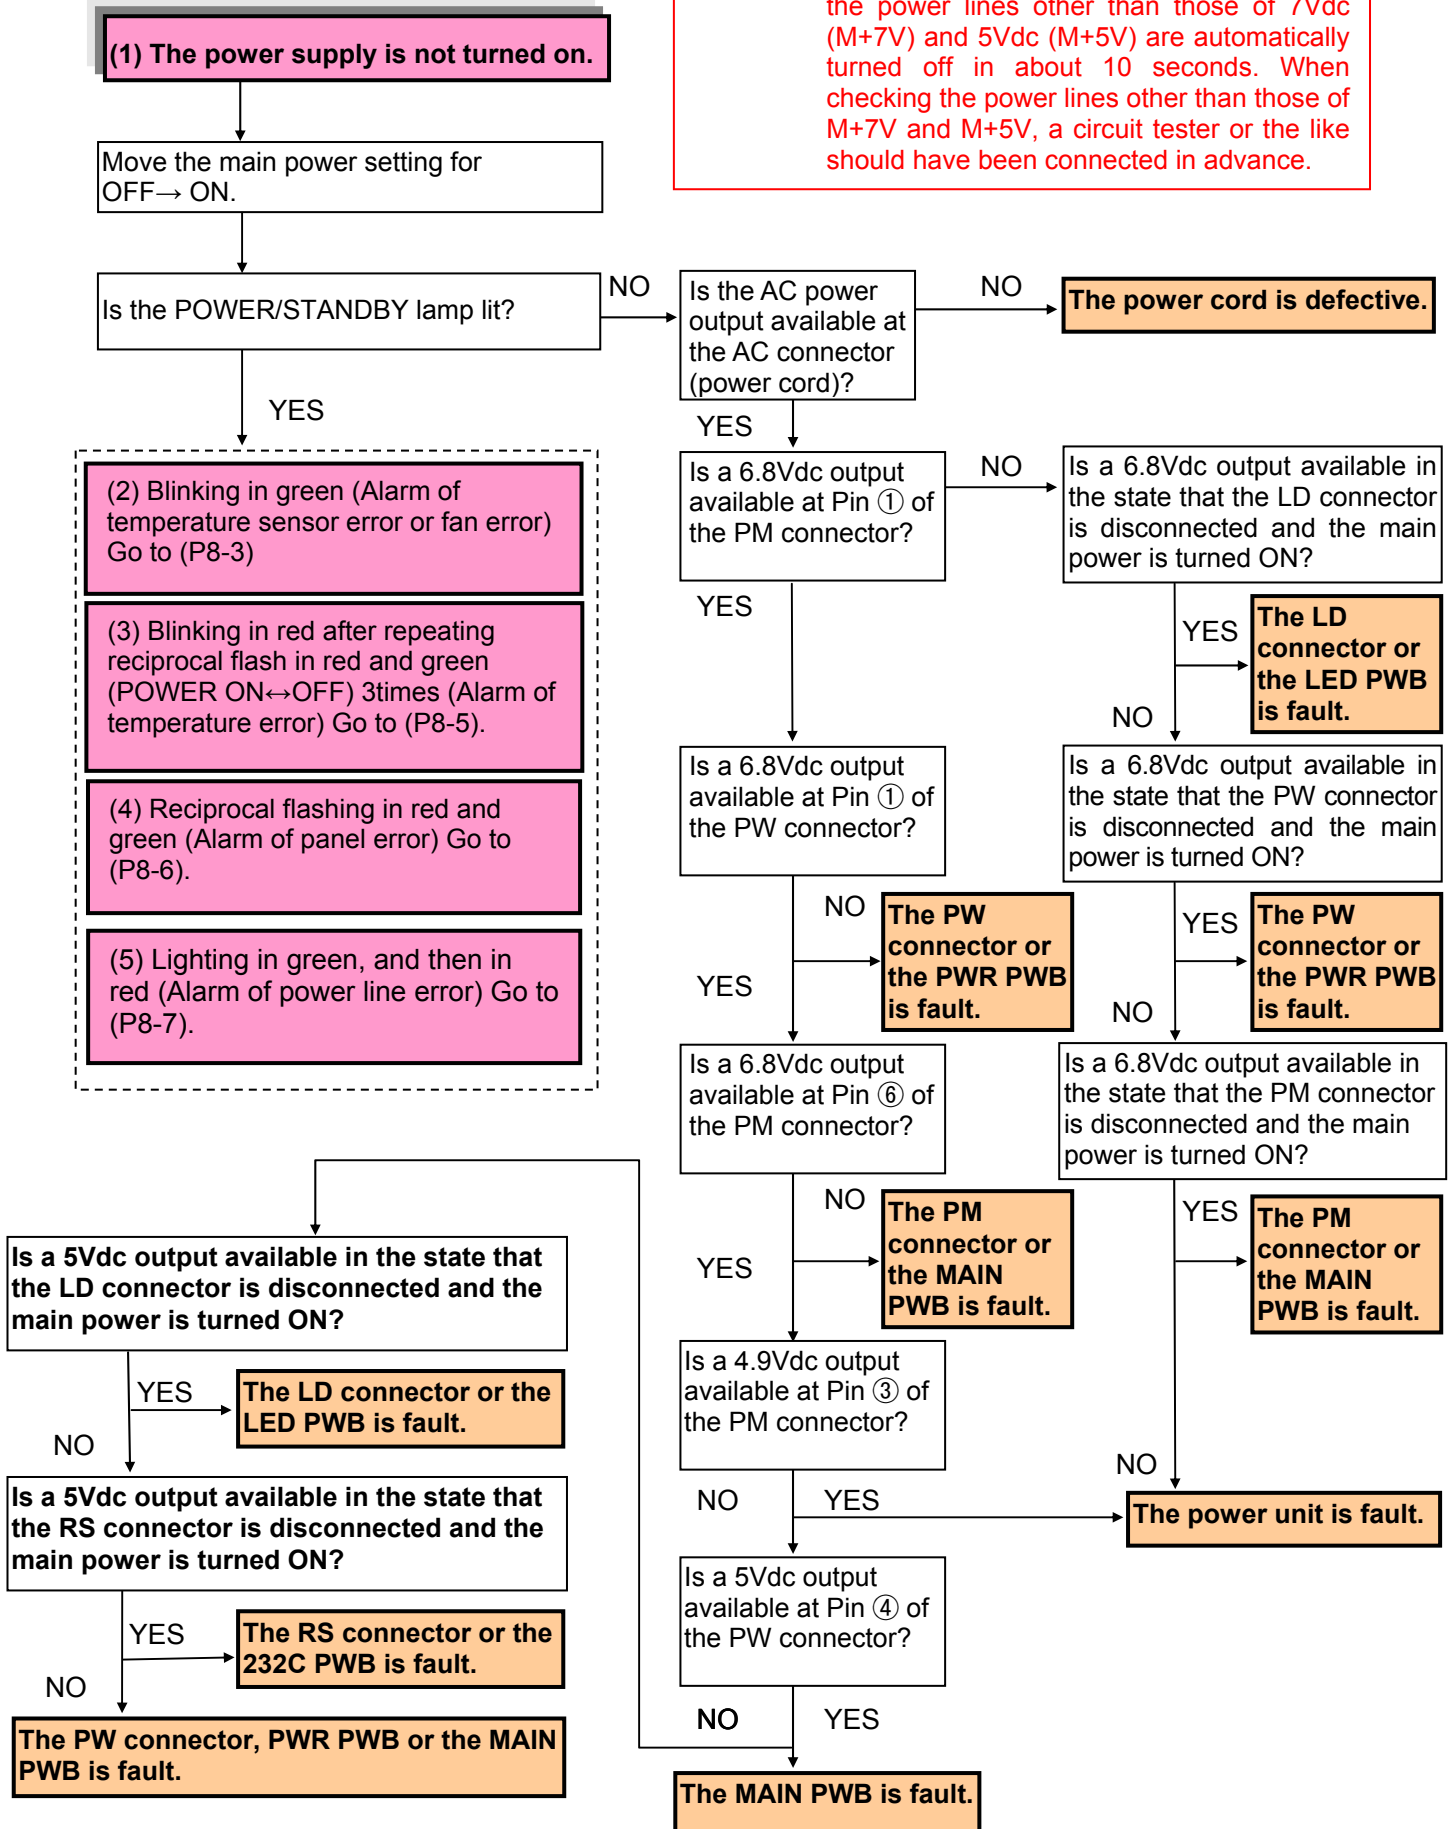

Note: If any flashing or luminescent spots are recognized during display check after a long period of storage of the module, perform aging with a fully white screen displayed for another hour or so.

TROUBLESHOOTING

- **Problems in the power supply, such as “Failure in Power ON” or “LED flashing or lighting (alarm display)”**
 - 1. Go to Power failure (P8-2).
- **Problems in the images, such as “No pictures available”**
 - 2. Go to Image errors (P8-8).
- **No video loop-out signal is generated.**
 - The MAIN PWB is faulty.
- **“Remote control not effective”**
 - 3. Go to Audio errors (P8-14).
- **“Remote control not effective”**
 - 4. Go to Remote control not effective (P8-15).
- **The closed caption is displayed incorrectly. (PX-*****A only)**
 - 5. Go to "The closed caption (CC) is displayed incorrectly." (P8-17).

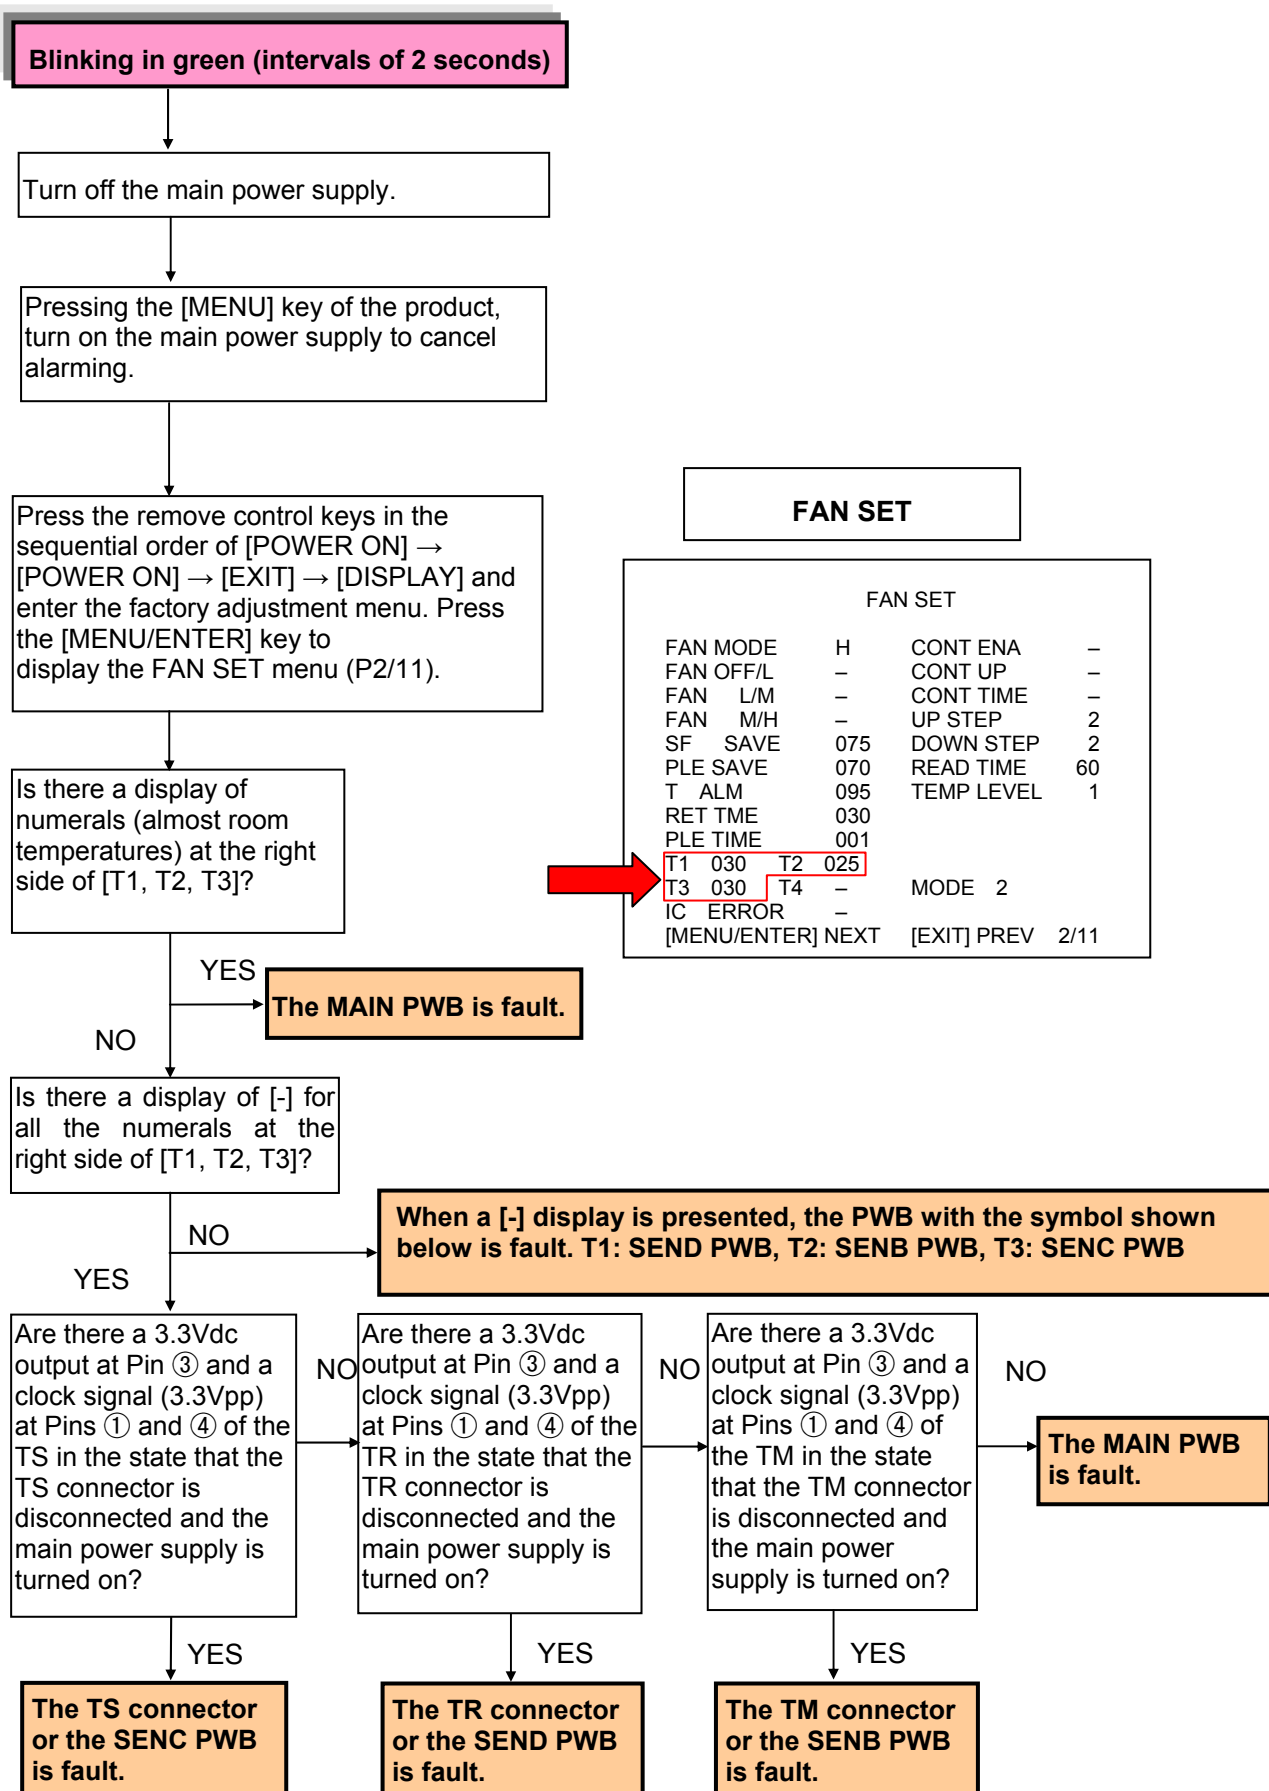

1. Power failure

(Caution) If any abnormality is sensed in such a manner that the LED flashes or lights, all the power lines other than those of 7Vdc (M+7V) and 5Vdc (M+5V) are automatically turned off in about 10 seconds. When checking the power lines other than those of M+7V and M+5V, a circuit tester or the like should have been connected in advance.

(2) Blinking in green

① Alarm of temperature sensor error

② Alarm of fan error

Blinking in green (intervals of 0.5seconds)

Turn off the main power supply.

Pressing the [MENU] key of the product, turn on the main power supply to cancel alarming.

Is the fan running?

(Caution) When alarming is canceled, [FAN MODE] of FAN SET (P2/11) in the factory adjustment menu automatically moves from [ENA] to [H], thus causing the fan to run.

FAN SET

FAN MODE	ENA	CONT ENA	—
FAN OFF/L	—	CONT UP	—
FAN L/M	—	CONT TIME	—
FAN M/H	—	UP STEP	2
FAN SAVE	075	DOWN STEP	2

[MENU/ENTER] NEXT	[EXIT] PREV	2/11	

NO

YES

Is there a 3.3Vdc output at Pin ③ of the FA and FB, FC connectors?

YES

The fan is out of order on the side where a 3.3Vdc output is generated.

NO

The MAIN PWB is fault.

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, at Pin 1 of the FA, FB, and FC connectors?

NO

YES

The FAN-A/FAN-B/FAN-C is fault.

(Caution) The FAN-C and FC connectors are used only for the 61XM3 Series.

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FA connector is disconnected and the mains power is turned ON?

YES

The FAN-A is fault.

NO

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FB connector is disconnected and the mains power is turned ON?

YES

The FAN-B is fault.

NO

Is there a voltage output of 11.3Vdc for PX-42XM3/XR3, 11.2Vdc for PX-50XM4/XR4, and 9.3Vdc for PX-61XM3/XR3, respectively, when the FC connector is disconnected and the mains power is turned ON?

YES

The FAN-C is fault.

NO

The MAIN PWB is fault.

(Caution) In the FAN MODE, [ENA] is automatically recovered when the main power is turned OFF → ON.

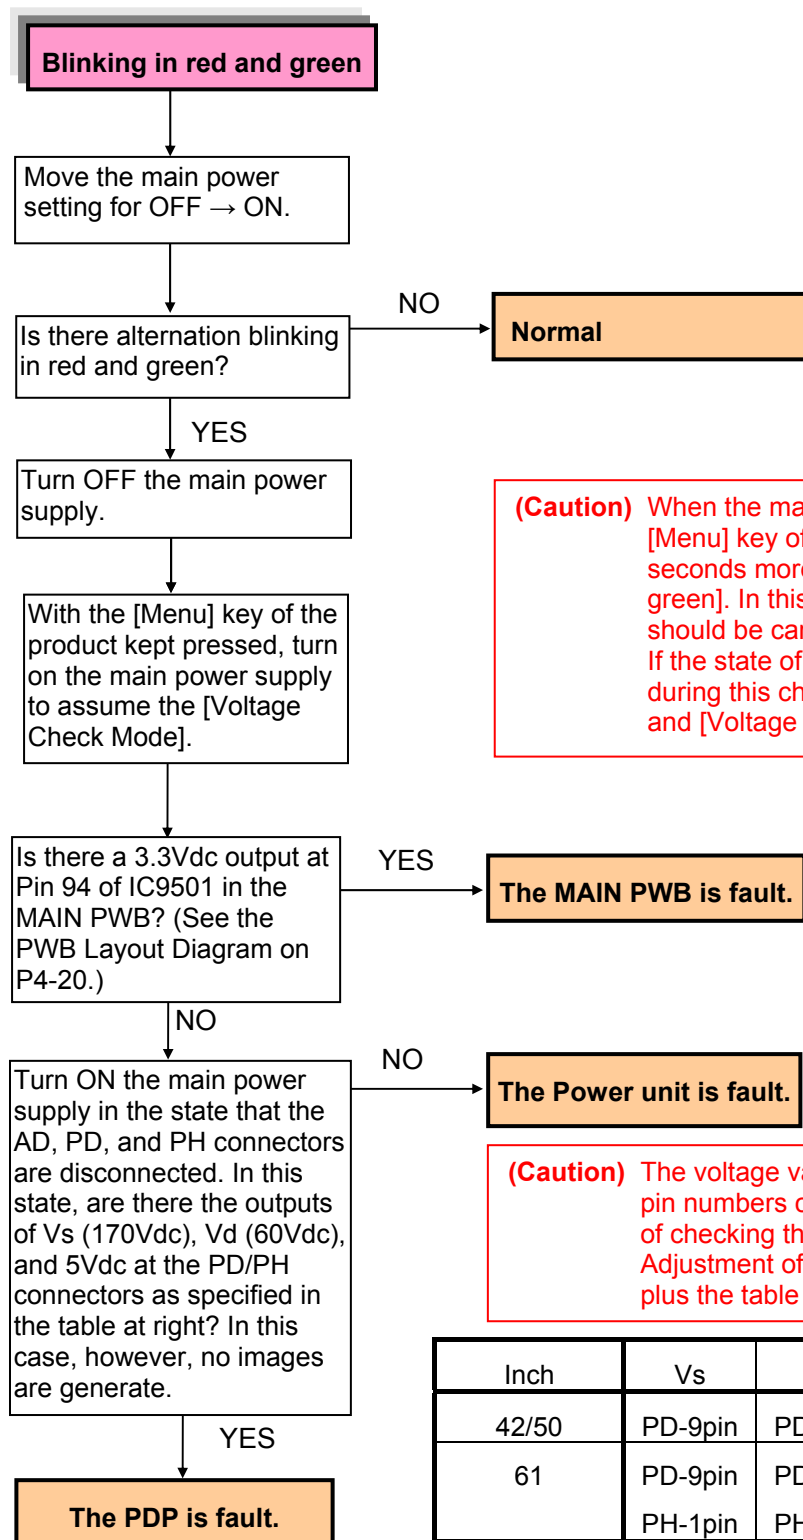

(3) Blinking in red (Alarm of temperature error)

Since the internal temperature is too high in the product, the temperature protector has been actuated. In such a case, the following actions should be taken immediately:

1. Turn off the main power supply and pull out the power cord from the wall outlet.
2. Wait for about 60 minutes until the temperature in the main unit lowers.
3. Check whether the heat discharge port is covered with dust or the like. If yes, remove the clogging substance.
4. If the unit is used where the ambient temperature is high, it should be moved to an adequate place (air temperature ranging from 5°C to 35°C).

(4) Alternation blinking in red and green (Alarm of PDP error)

(Caution) How to reset the alarming condition
Pressing the [Input Select] key of the product, turn on the main power supply of the main unit. In this state, keep pressing the [Input Select] key for more than 2 seconds until alarming is canceled. Make confirmation by the method specified below.

(Caution) When the main power supply is turned on with the [Menu] key of the product kept pressed, it takes 30 seconds more to assume the state of [blinking in red and green]. In this time period, the following voltage checks should be carried out.
If the state of [blinking in red and green] is assumed during this checking, take actions of [Alarm Canceling] and [Voltage Check Mode Setup] again.

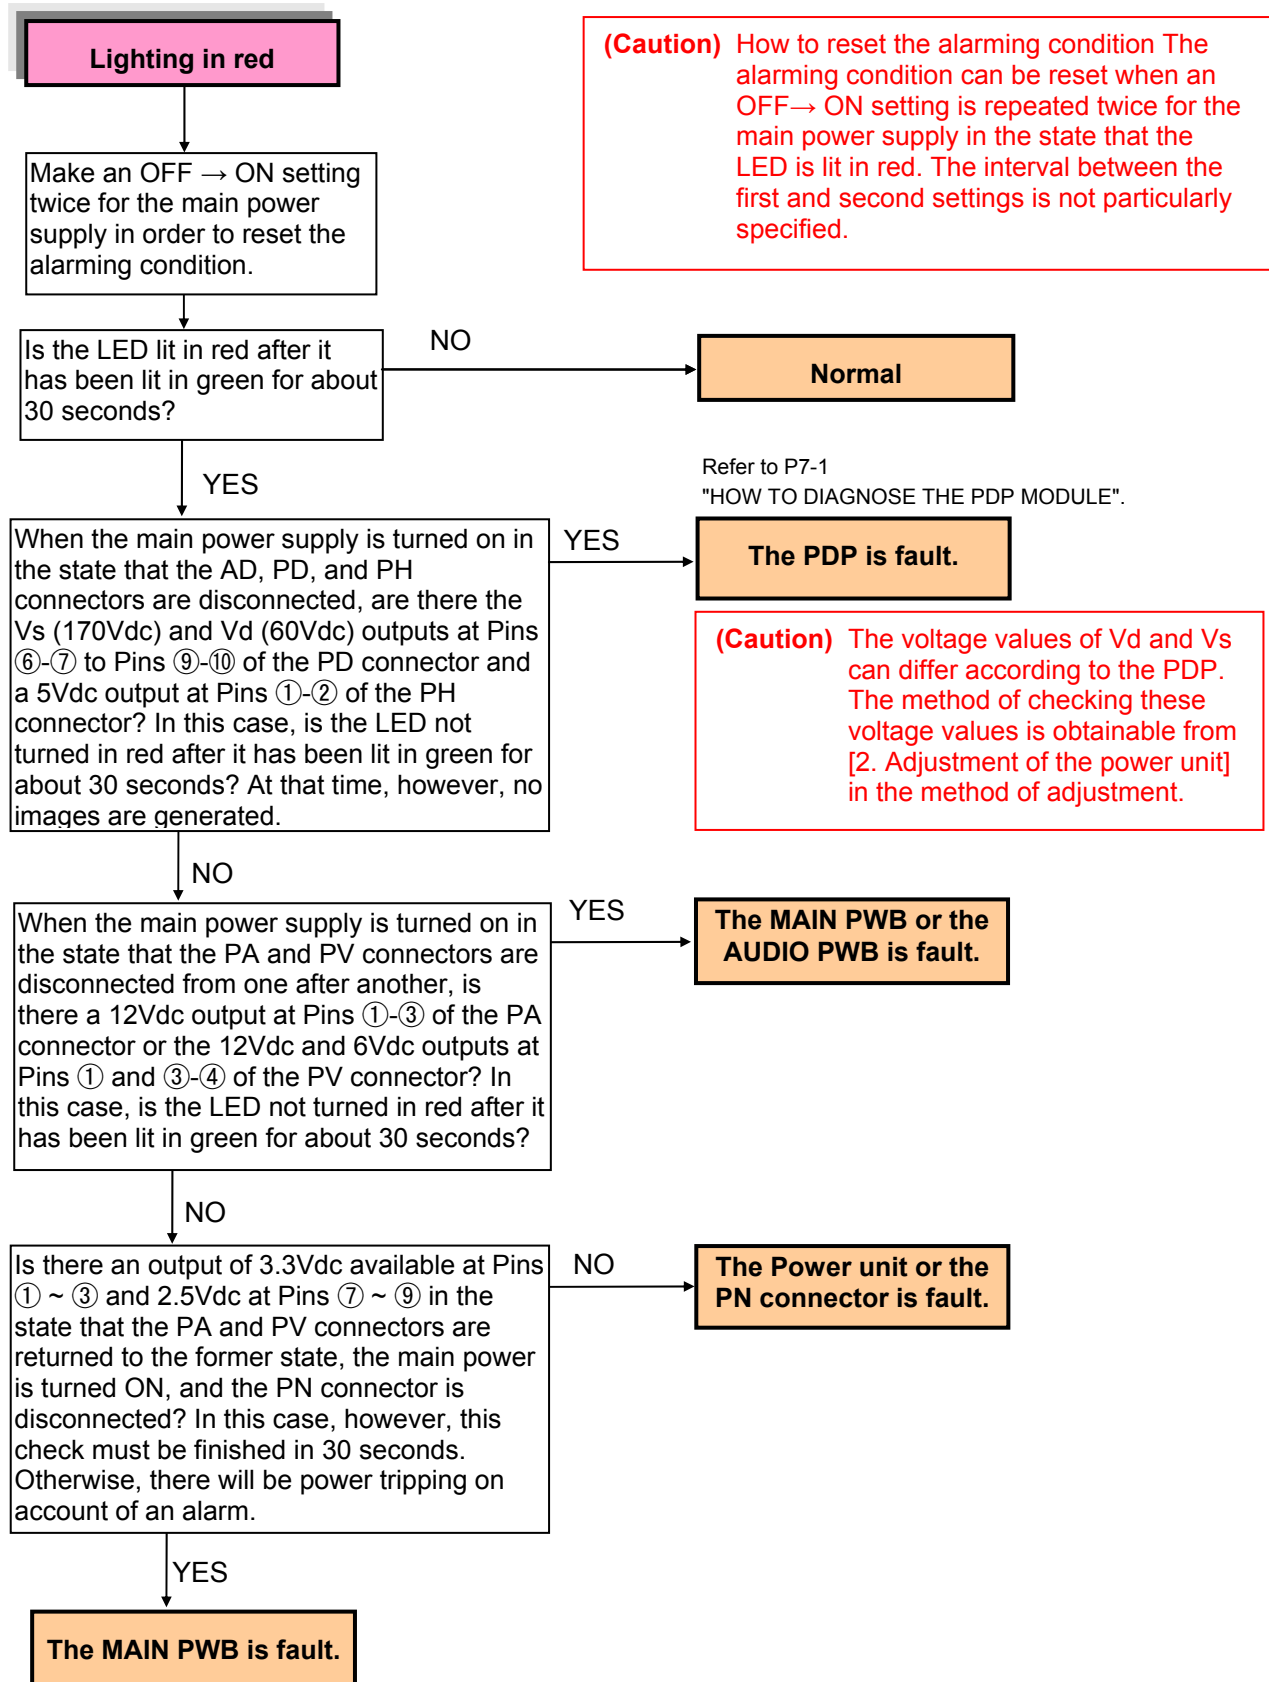

(Caution) The voltage values of Vd and Vs and also the connector pin numbers can differ according to the PDP. The method of checking these voltage values is obtainable from [2. Adjustment of the power unit] in the method of adjustment plus the table specified below.

Inch	Vs	Vd	GND	5Vdc	GND
42/50	PD-9pin	PD-7pin	PD-5pin	PH-1pin	PH-3pin
61	PD-9pin	PD-7pin	PD-5pin	PD-4pin	PD-5pin
	PH-1pin	PH-4pin	PH-5pin	PH-7pin	PH-5pin

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

(5) Lighting in green, and then in red (Alarm of power voltage error)

Unlike [lighting in red] in the STANDBY mode, [lighting in green] continues for about 30 seconds without any output of images and audio signals. Since then, the mode turns into [lighting in red].

2. Image errors

(Caution) Typical abnormal images are shown below. All errors do not always fall on these error samples.

(1) Image burn and deterioration in brightness

Residual images are seen without signal entry.

This is not a fault.

No signal

Deterioration in brightness

This is not a fault.

All-whitesignal

(2) Failure in writing

Failure in writing

The PDP is fault.

All-whitesignal

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

Dot errors change with no continuity.

All-whitesignal

(4) Wrong lighting

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-black signal

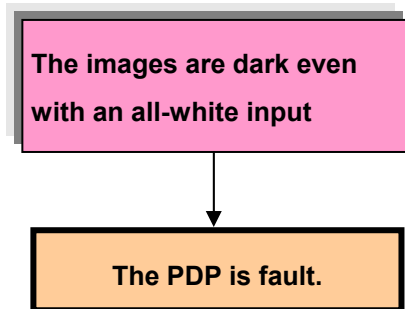

Dot errors change with no continuity.

All-black signal

(5) Dark images [Other than the deterioration in brightness as per (1) above]

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

(6) Defect in horizontal lines

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

All-white signal

All-white signal

Defect in the block unit

The PDP is fault.

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

All-white signal

(7) Defect in vertical lines

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

All-white signal

All-white signal

(Refer to P7-1 "HOW TO DIAGNOSE THE PDP MODULE".)

All-white signal

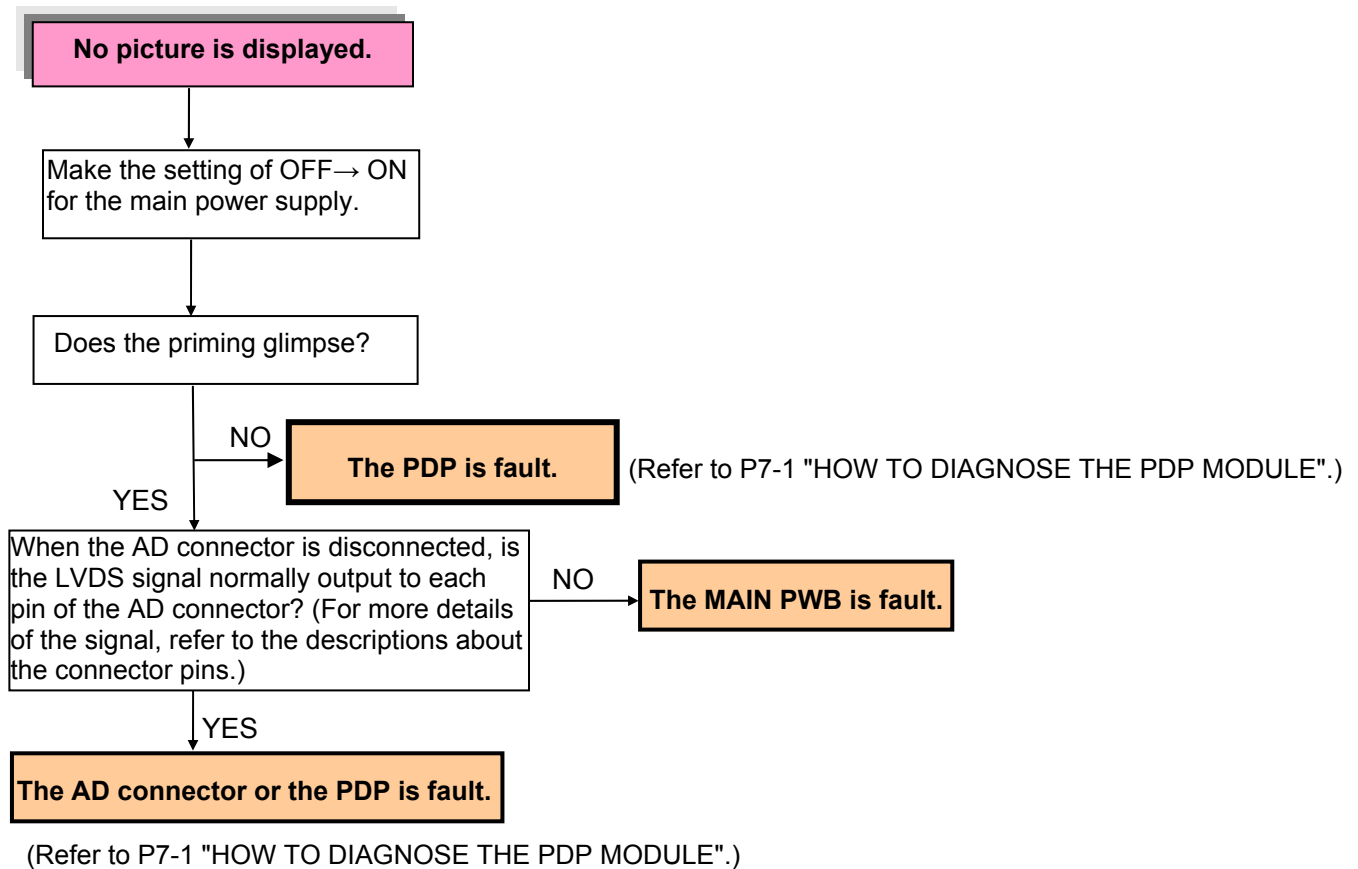

All-white signal

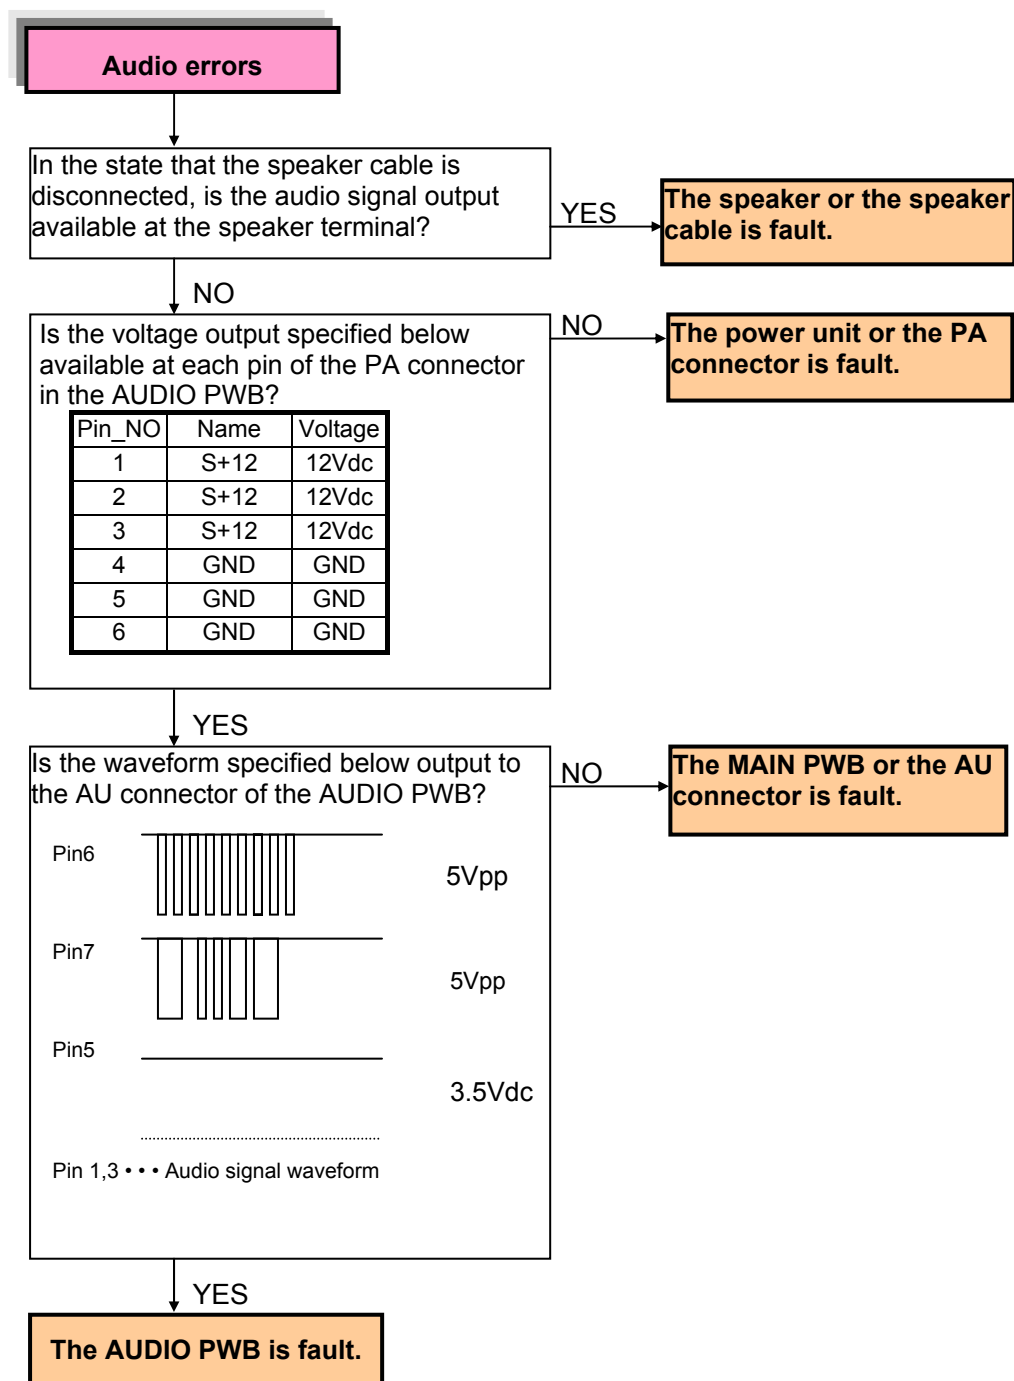

All-white signal

(8) No pictures [(Caution) The voltage outputs of $V_s = 170V$ and $V_d = 64V$, $5V_{dc}$ are always generated, but the LED is not flashing or lighting for alarming. However, the voltage values can differ according to the MODULE.]

3. Audio errors

(Caution) In regard to the method of audio input setting, refer to the specifications and the instruction manual to confirm that all the setting is free from errors. Since then, troubleshooting can be carried out. It must be noted that the protector functions and no audio output is available if the opposing electrodes of the speaker output or the speaker output and the ground (GND) are short-circuited. In such a case, turn off the main power supply and make the connections correctly. The protector is reset when the main power supply is turned on after that.

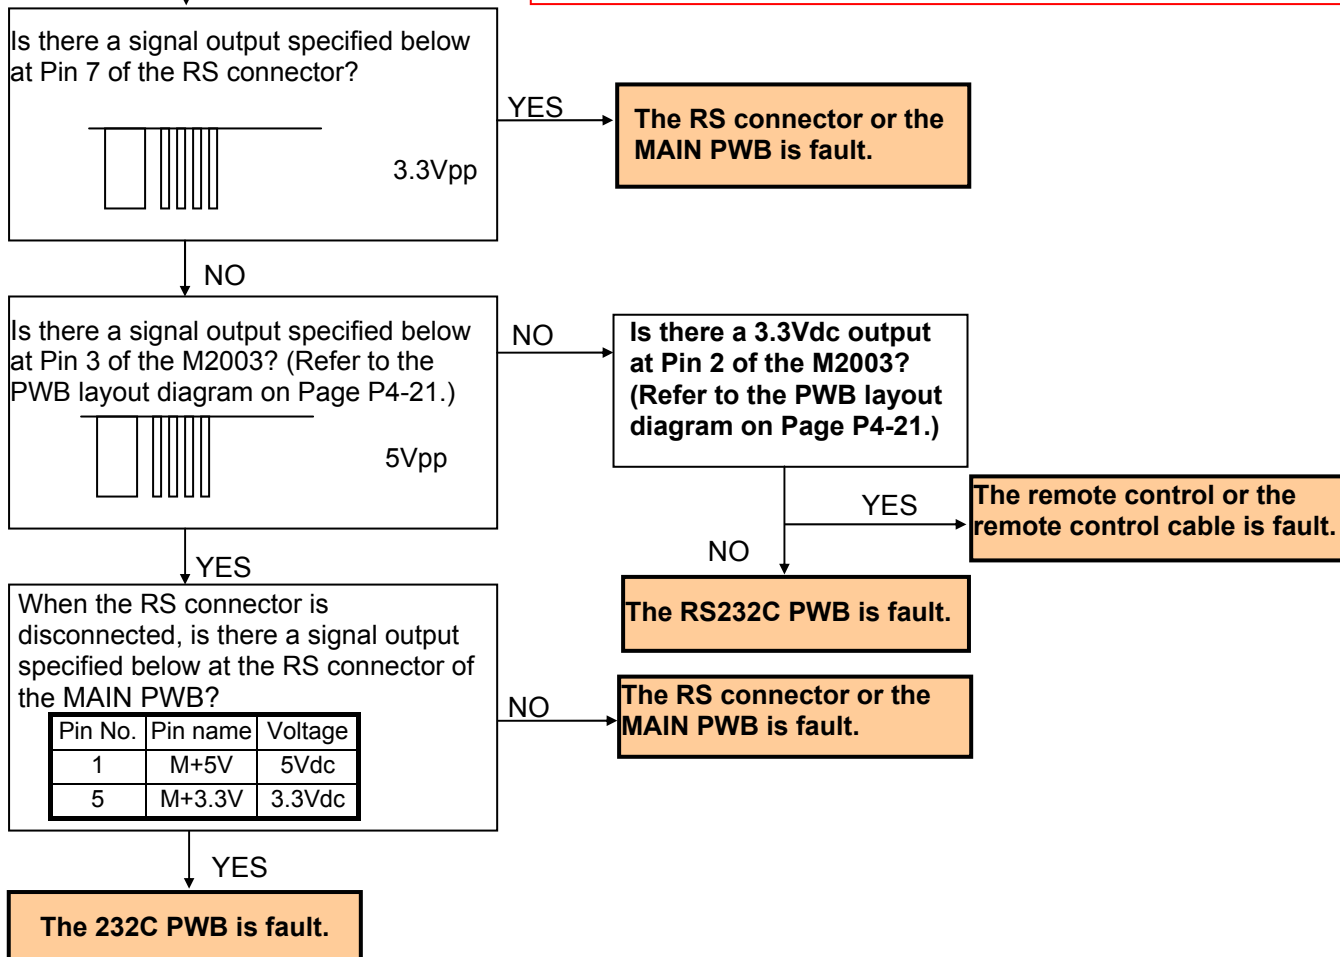

4. Remote control not effective

(1) The wired remote control is not effective.

① When a single item is used

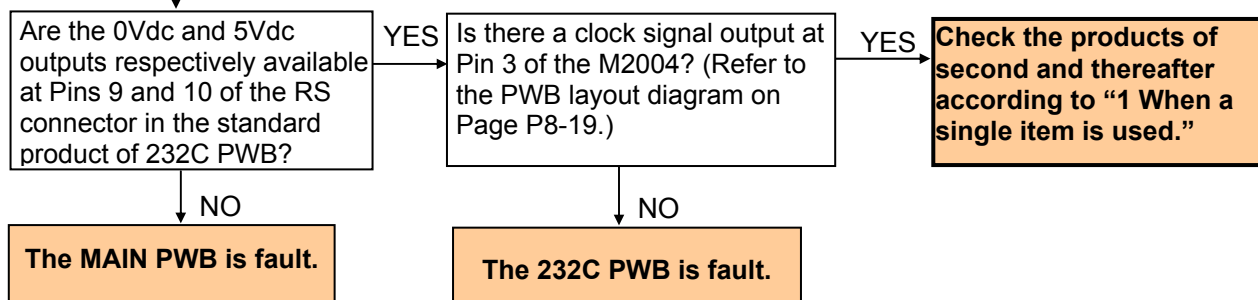

The wired remote control is not effective.

(Caution) The wired remote control is not effective if the setting of [PLE LINK], or [Repeat TIMER] is ON, or if the setting of [ID NUMBER] has been made. Therefore, such a setting should be turned off, without fail. Since then, troubleshooting can be carried out.

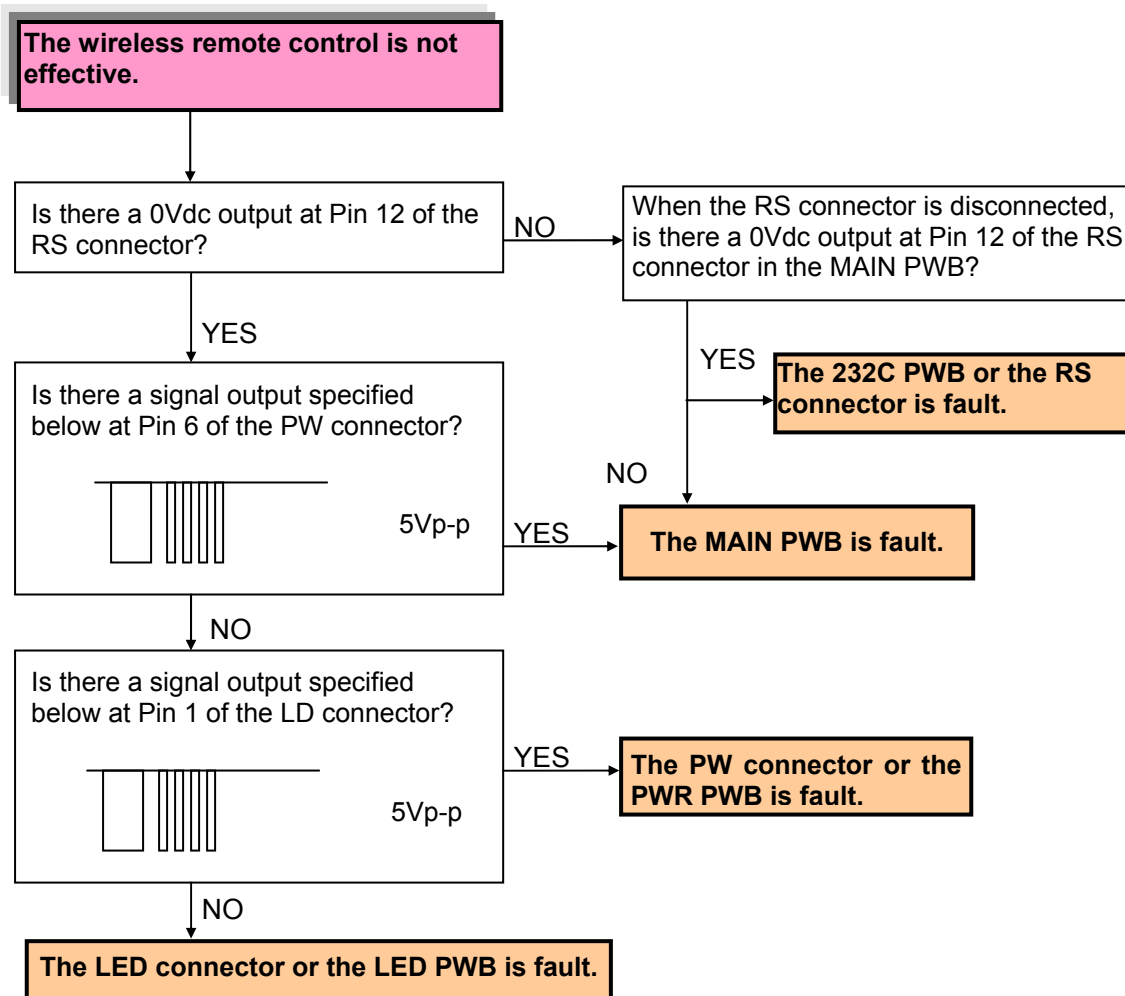

② When a daisy chain (including the video wall) is used

The wired remote control is not effective.

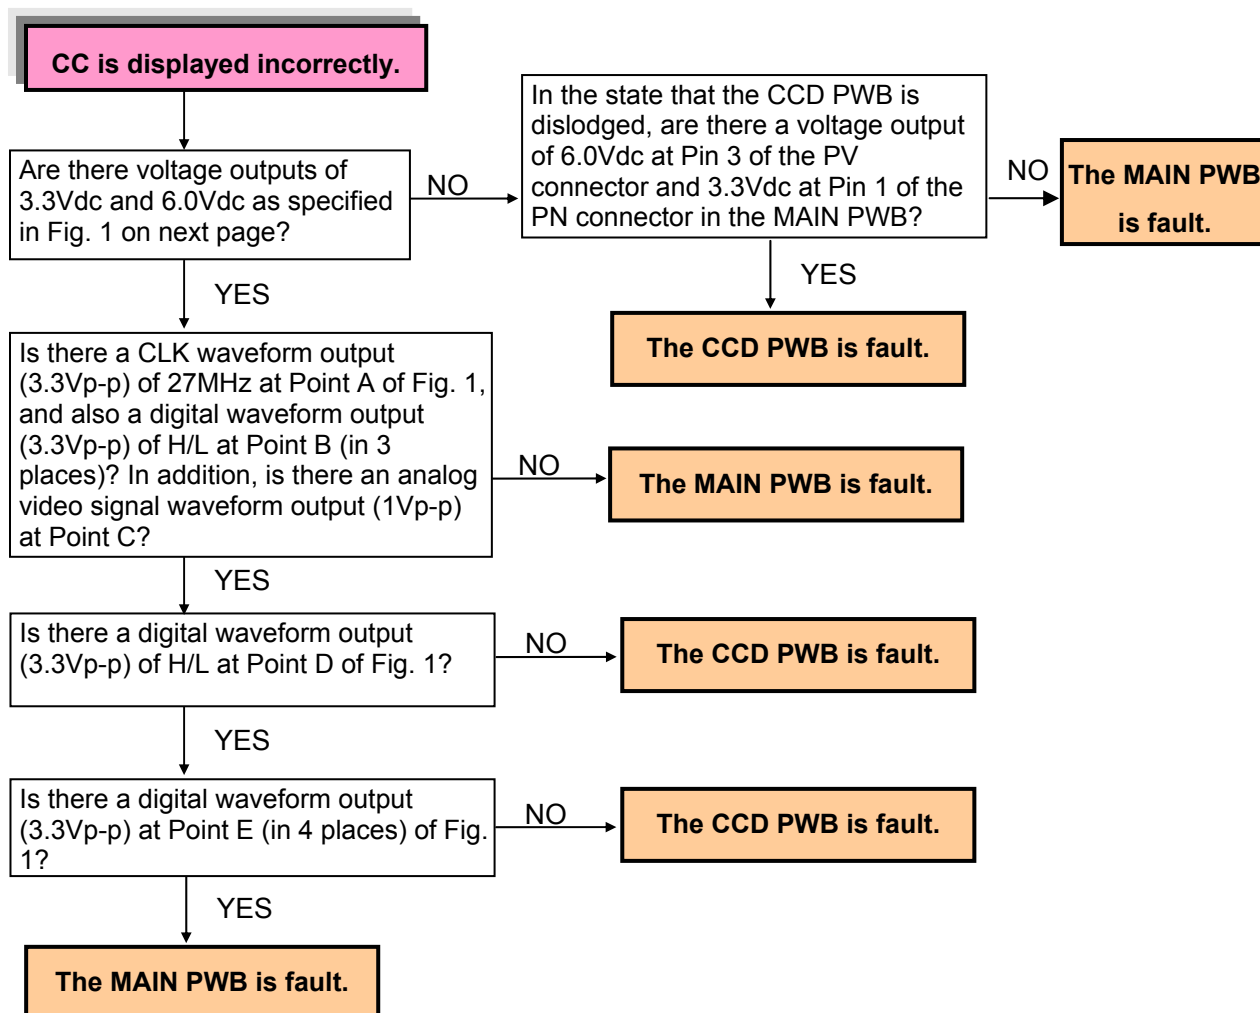

(2) The wireless remote control is not effective.

(Caution) Since the detection of “wired” or “wireless” is conducted for the remote control through the remote terminal, it is necessary to pull out the remote control cable from the remote terminal, without fail. Troubleshooting should be carried out after confirming that “IR REMOTE” is set at ON and that “ID NUMBER” is at ALL according to the user’s menu.

5. The closed caption (CC) is displayed incorrectly. (PX-****A only)

(Caution) Only the models for North America. The PCB-5044 (CCD PWB) is not installed in other models. Checks are needed by applying a signal output to the video input circuit, which is equivalent to the closed caption.

Waveform at Point B/D/E

Check point: Check voltage and see whether a change in H/L is present.

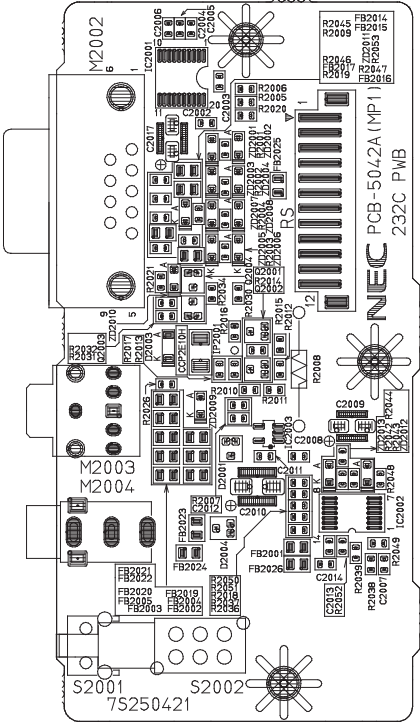

Waveform at Point C

NTSC video signal (with gray scale input)

<Fig. 1 CCD PWB Pattern Diagram>

SEND PWB

CCD PWB (PX-*****A only)

METHOD OF ADJUSTMENTS

■Adjusting conditions

Adjustments should be carried out in the procedures of A to C specified below. However, any adjustments other than the items A to C below are not required.

- A. When the “PDP module (PDP-NP61C2MF01)” is replaced, adjustments should conform to the adjusting items of [1 and 2] specified below.
- B. When the “POWER UNIT” is replaced, adjustments should conform to the adjusting item of [2] specified below.
- C. When the “MAIN PWB” is replaced, adjustments should conform to the adjusting item of [3] specified below.

■Adjusting items

1. Clearing of the usage time (Using the remote control)

- (1) Press the keys in the order of [POWER ON] → [POWER ON] → [EXIT] → [DISPLAY] in order to enter the factory adjustment menu.
- (2) Press the [MENU/ENTER] key to select the [USAGE TIME] menu (8/11). Then, the integrated time [34567 (hours)] (example) accumulated till the present time is displayed when the main power supply is turned on (except for the standby mode).

USAGE TIME		
34567H		
232C-ALARM	RX TX	0 0
[MENU/ENTER] NEXT [EXIT] PREV 8/11		

- (3) When the keys are pressed in the order of [MUTE] → POSITION/CONTROL [▲] → POSITION/CONTROL [▼] → [OFF TIMER], the display is cleared to [00000H]. At that time, the characters of [RESET] are displayed for about 5 seconds on the right side of time display.

USAGE TIME		
00000H	RESET	
232C-ALARM	RX TX	0 0
[MENU/ENTER] NEXT [EXIT] PREV 8/11		

2. Adjustment of the power unit (Using a screwdriver for general-purpose adjustments)

2-1. Adjustment of the Vs voltage

- (1) Enter a color bar input by means of either video signal of VIDEO input, or DVD/HD input, or RGB input, and turn on the power switch of the main unit.
- (2) Turn the volume control (RV6) in the power unit and make adjustments until the voltages of CH2 and CH1 (D, GND) of the power unit attain the voltage values specified for the PDP (Vs value of the voltage regulation indicator label on below the figure) $\pm 1V$.

2-2. Adjustment of the Vd voltage

- (1) Enter a color bar input by means of either video signal of VIDEO input, or DVD/HD input, or RGB input, and turn on the power switch of the main unit.
- (2) Confirm that the voltages of CH4 and CH1 (D, GND) of the power unit are maintained at the voltage values specified for the PDP (Vd value of the voltage regulation indicator label on below the figure) $\pm 1V$.
Otherwise, turn the volume control (RV5) until the voltage attains the voltage values specified for the PDP (Vd value of the voltage regulation indicator label on below the figure) $\pm 1V$.

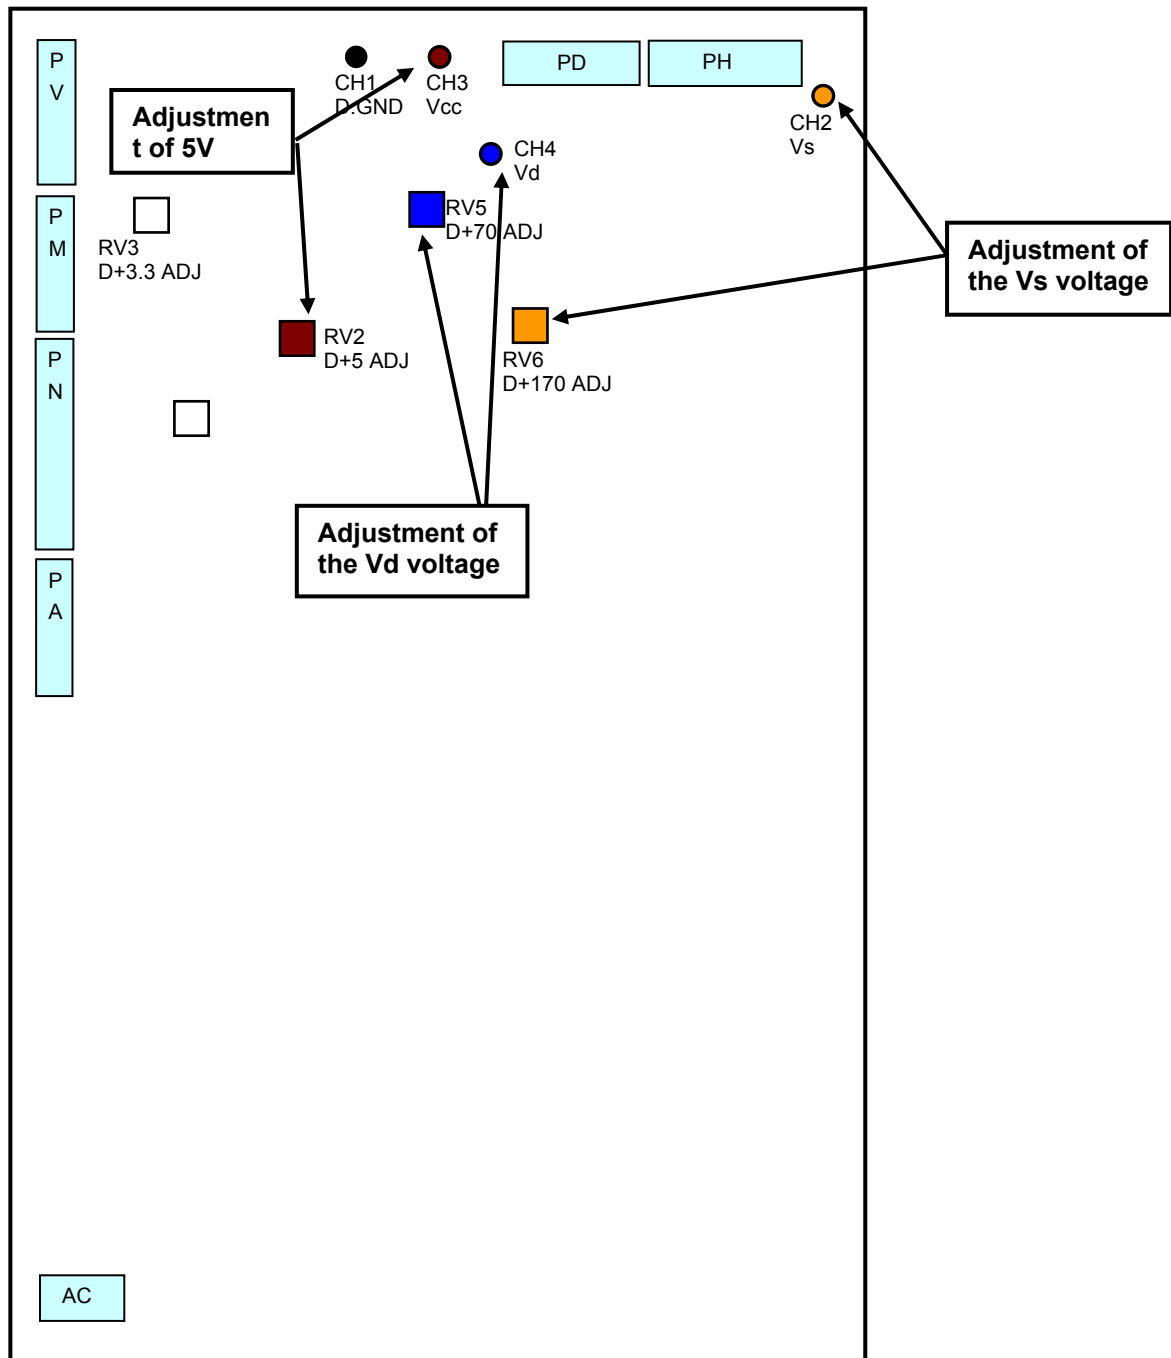

2-3. Adjustment of the +5V voltage

- (1) Display a color bar by means of either video signal of VIDEO input, or DVD/HD input, or RGB input.
- (2) Confirm that the voltages of CH3 and CH1 (D, GND) of the power unit are maintained at " $5.15 \pm 0.1V$ ". Otherwise, turn the volume control (RV2) until the voltage attains " $5.15 \pm 0.1V$ ".

(Caution) Rear-side view when the back cover is removed The label is concealed between the MAIN PWB and PDP. Check it by peeping through the space from above. The label position can be changed, without notice.

* Top view of the power unit (Adjustment VR location)

3. Adjustments after the replacement of the MAIN PWB (Using the remote control)

3-1. Product serial No. registration

- (1) Press the keys in the order of [POWER ON] → [POWER ON] → [EXIT] → [DISPLAY] in order to enter the factory adjustment menu.
- (2) Press the [MENU/ENTER] key to select the [MONITOR INFORMATION] No. menu. (Example : PDP-614MX)

[Factory shipment setting values]

1. Initial setting values for the user menu

MENU	A,AW,G,GW,W,WW	J,JW
POWER ON/OFF	ON	ON
VOLUME	10step	10step
INPUT MODE	VIDEO1	VIDEO1
WIDE MODE	STADIUM	STADIUM
AUTO PICTURE	OFF (RGB1~3)	OFF (RGB1~3)
HD SELECT	1080B *	1080B
LANGUAGE	ENGLISH	JAPANEASE
COLOR SYSTEM	AUTO	AUTO
All items intended to recover the initial values through the selection of [All Reset] in the user menu		Initial values

* 1080I for *PX-***R**

2. Field menu initial setup values (applicable in common to all models)

MENU		A	G	W	J	AW,GW,WW,JW
SERVICE	SHIP	A	G	W	J	AW,GW,WW,JW
	PSC-LIMIT	OFF	OFF	OFF	OFF	OFF
	LIMIT-PC	ON	ON	ON	ON	ON
	U-SCAN	OFF	OFF	OFF	OFF	OFF
	V-FREQ OT	AUTO	60Hz	60Hz	AUTO	AUTO
	V-FREQ VD	AUTO	60Hz	60Hz	AUTO	AUTO
	SYNCLEVEL1	TTL	TTL	TTL	TTL	TTL
	SYNCLEVEL2	TTL	TTL	TTL	TTL	TTL
	SUB-ORB *1	ON	ON	ON	ON	ON
	PIC FREEZE *1	ON	ON	ON	ON	ON
MONITOR INFORMATION	LOCATION	USA	Europe	other	Japan	*2

*1:PX-50XM4/50XR4,PX-61XM3/61XR3 Selies only.

*2:Monitor information when SHIP is for AW, GW, WW, JW setup

PX-42VM5/42VP5/42VR5 Series: 42-WVGA

PX-42XM3/42XR3 Series: 42-WXGA,

PX-50XM4/50XR4 Series: 50-WXGA,

PX-61XM3/61XR3 Series (PDP-614MX, PRO-1410HD): 61-WXGA,

3. Initial setting values for the Factory shipment setting menu The table shown below specifies only the items that can be changed in the factory adjusting mode. Therefore, any setting values of the items not specified below cannot be modified.

MENU		A,AW	G,GW	W,WW	J,JW
FUNCTION	SHIP	A or AW	G or GW	W or WW	J or JW
	LIMIT-PC	ON	ON	ON	ON
MONITOR INFORMATION	SERIAL/ NUMBER	-	-	-	-

[Materials for reference]

1. Signal generator

(1) Digital RGB

, Component signal generator

- Equivalent to the VIDEO GENERATOR LT1615 (made by LEADER)
- Equivalent to the PANEL LINK ADAPTER LT9217 (made by LEADER)
- Equivalent to the VIDEO ENCODER LT1606 (made by LEADER)

(2) NTSC signal generator

- Equivalent to the NTSC PATTERN GENERATOR LCG-403YC (made by LEADER)

(3) PAL signal generator

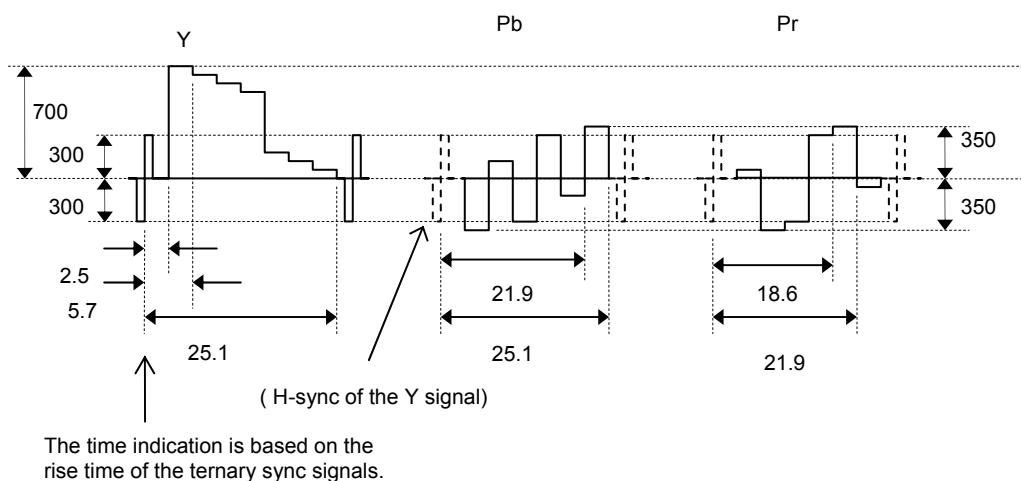

- Equivalent to the COLOR BAR PATTERN GENERATOR PM5518 (made by PHILIPS)

2. VIDEO input

Input: Composite video input or S-terminal input

3. DVD/HD/DTV inputs

3-1. HD: Y/Pb/Pr component inputs, ternary sync signals

3-2. DVD: Y/Cb/Cr component inputs

4. RGB inputs

1) Horizontal sync period

Video signal

0.7Vp-p

Sync signal

TTL level

Positive/negative polarity

2) Vertical sync period

Video signal

0.7Vp-p

Sync signal

TTL level

Positive/negative polarity

For the respective inspection signals, the above “a” to “j” shall be listed on the next page and thereafter.

5. RGB/PC signal timing table

(Caution 1) For HDCP non-application products, the signals of the PC mode 1 ~ 89 can be received. For HDCP application products, the signals of the PC mode 1 ~ 98 can be received.

(Caution 2) The received PC mode number specified below is displayed in the memory column of the user menu "Information."

PC mode	1	2	3	4	5

METHOD OF DISASSEMBLY

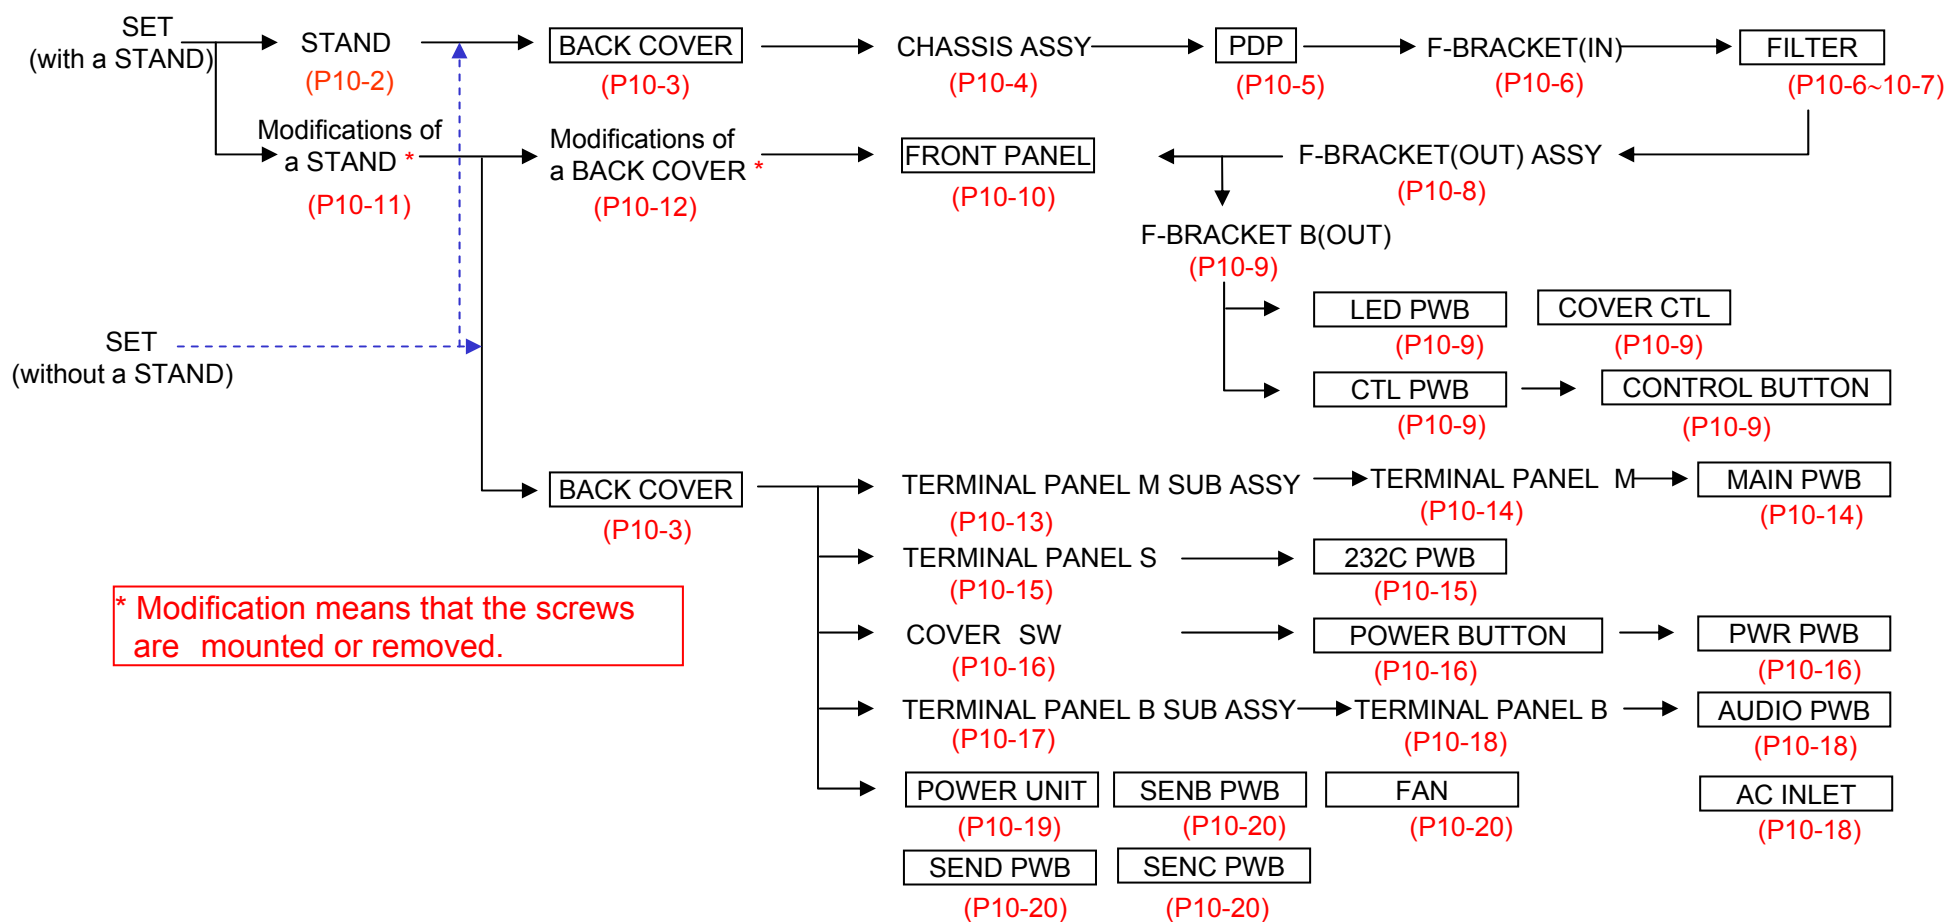

- (Caution)**
1. Before disassembly, turn power off the main unit and pull out the power plug from the wall outlet.
 2. Use a screwdriver with a fitting size. Otherwise, the screw threads may be damaged.
 3. Reassembly can be carried out in the reverse order for disassembly. Refer to the disassembly procedures and forward reassembly in the reverse order.
 4. The order for taking out the parts (or components) is indicated by the foregoing numeral that is attached to the name of each part.
 5. The wire connector symbol is indicated by two digits of Marking □□. Read CN-□□ when examining the table of parts.
 6. Class A or Class B in the text is applicable to the models specified below.

CLASS A: PX-61XM3J,61XM3A,61XM3W,61XM3G, CLASS B: PDP-614MX,PRO-1410HD,PX-61XR3A,61XR3W,61XR3G

1. Outlined method of disassembly

The outlined procedures for the disassembly of the major parts are shown below (disassembled in the direction of →).

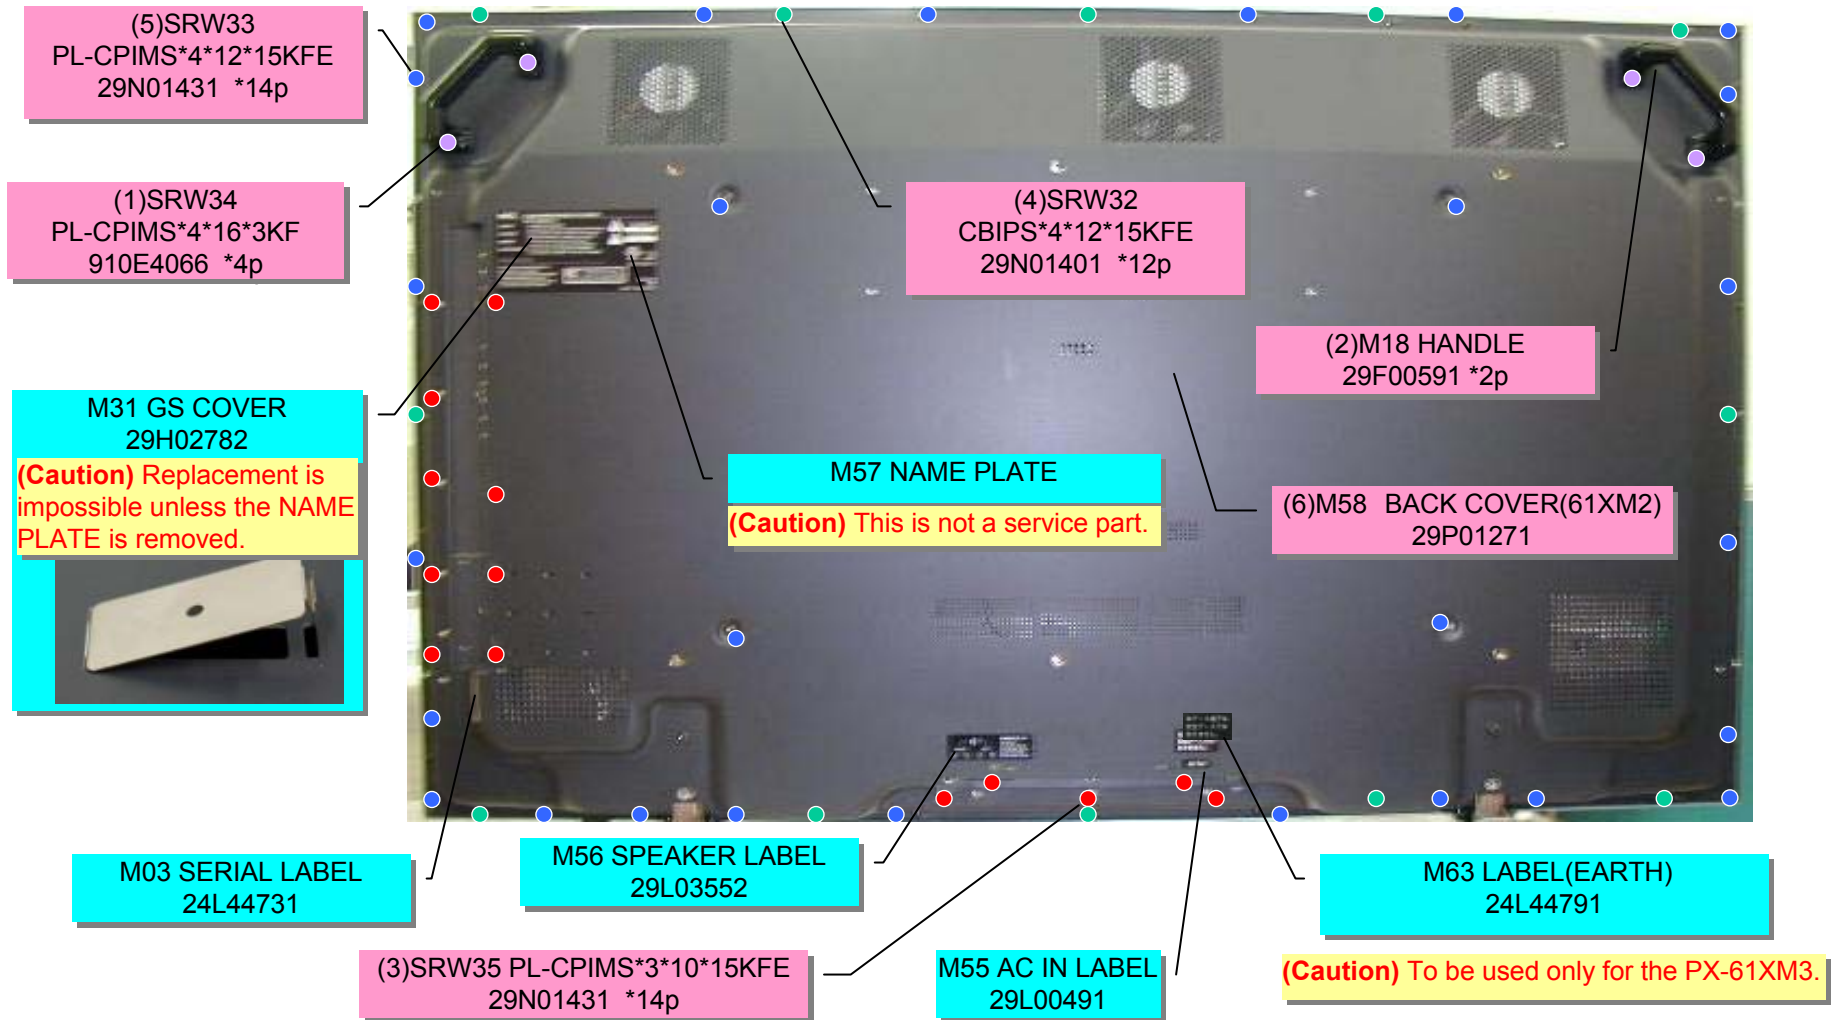

In regard to the details of disassembly, cautions, etc., refer to the method of replacement for each part [page indicated in ()].

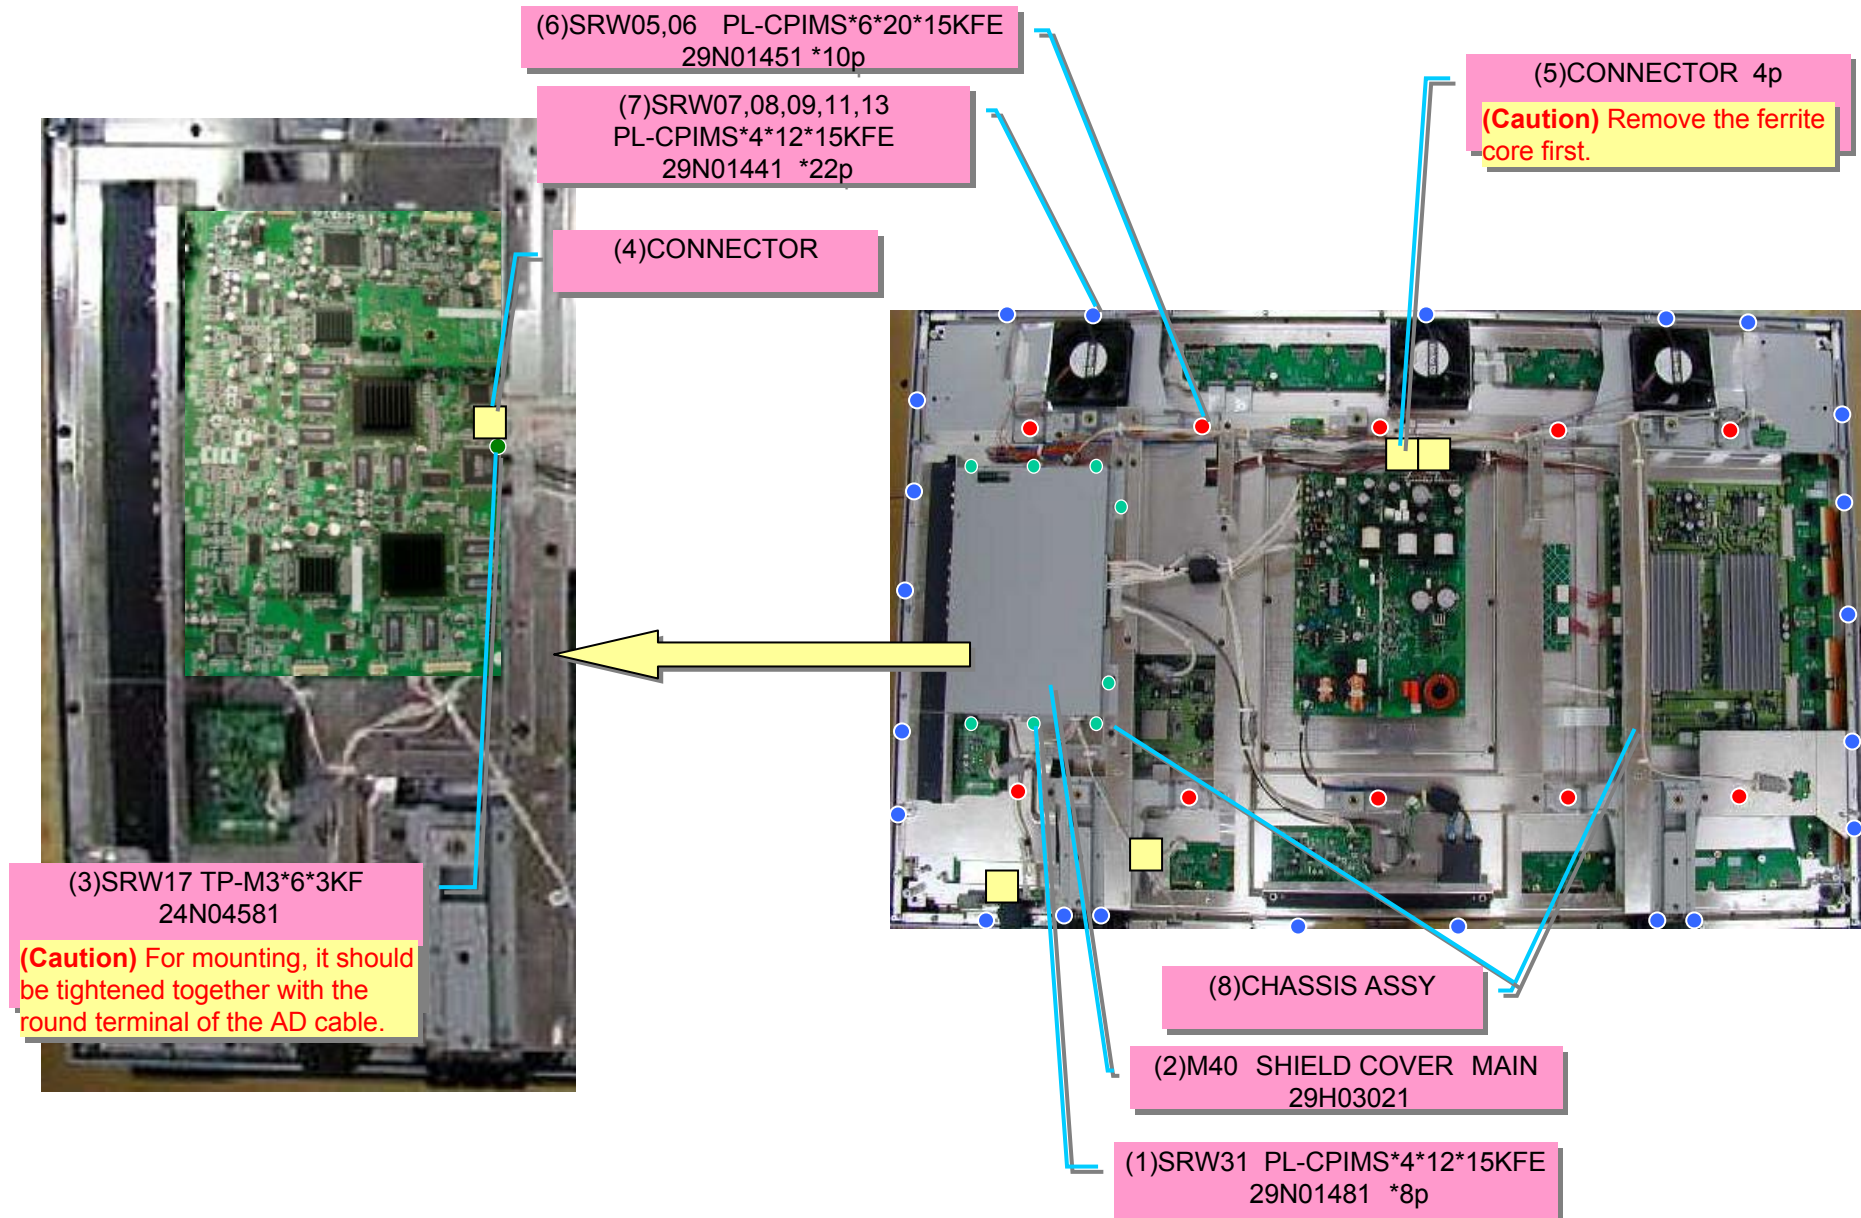

2. STAND

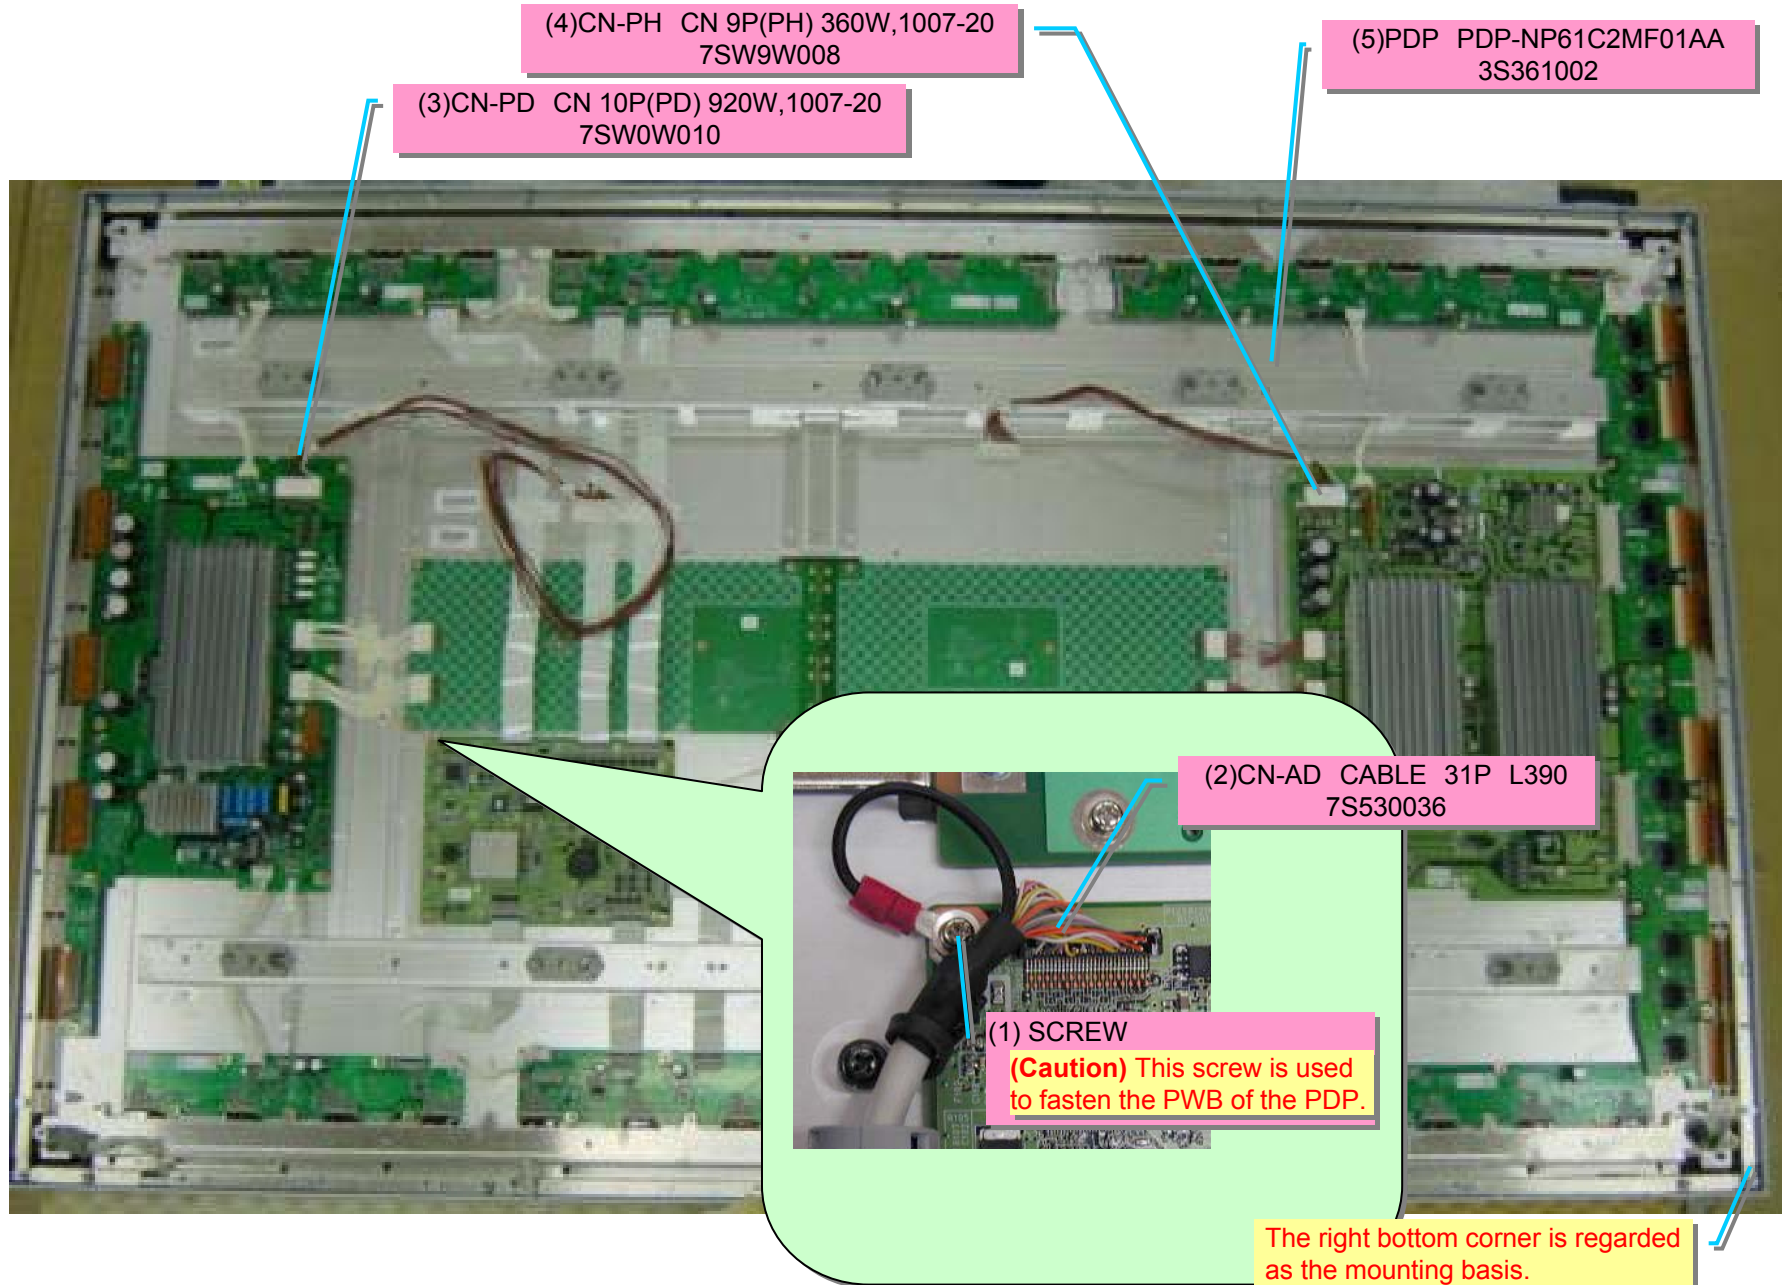

3. BACK COVER

4. CHASSIS ASSY

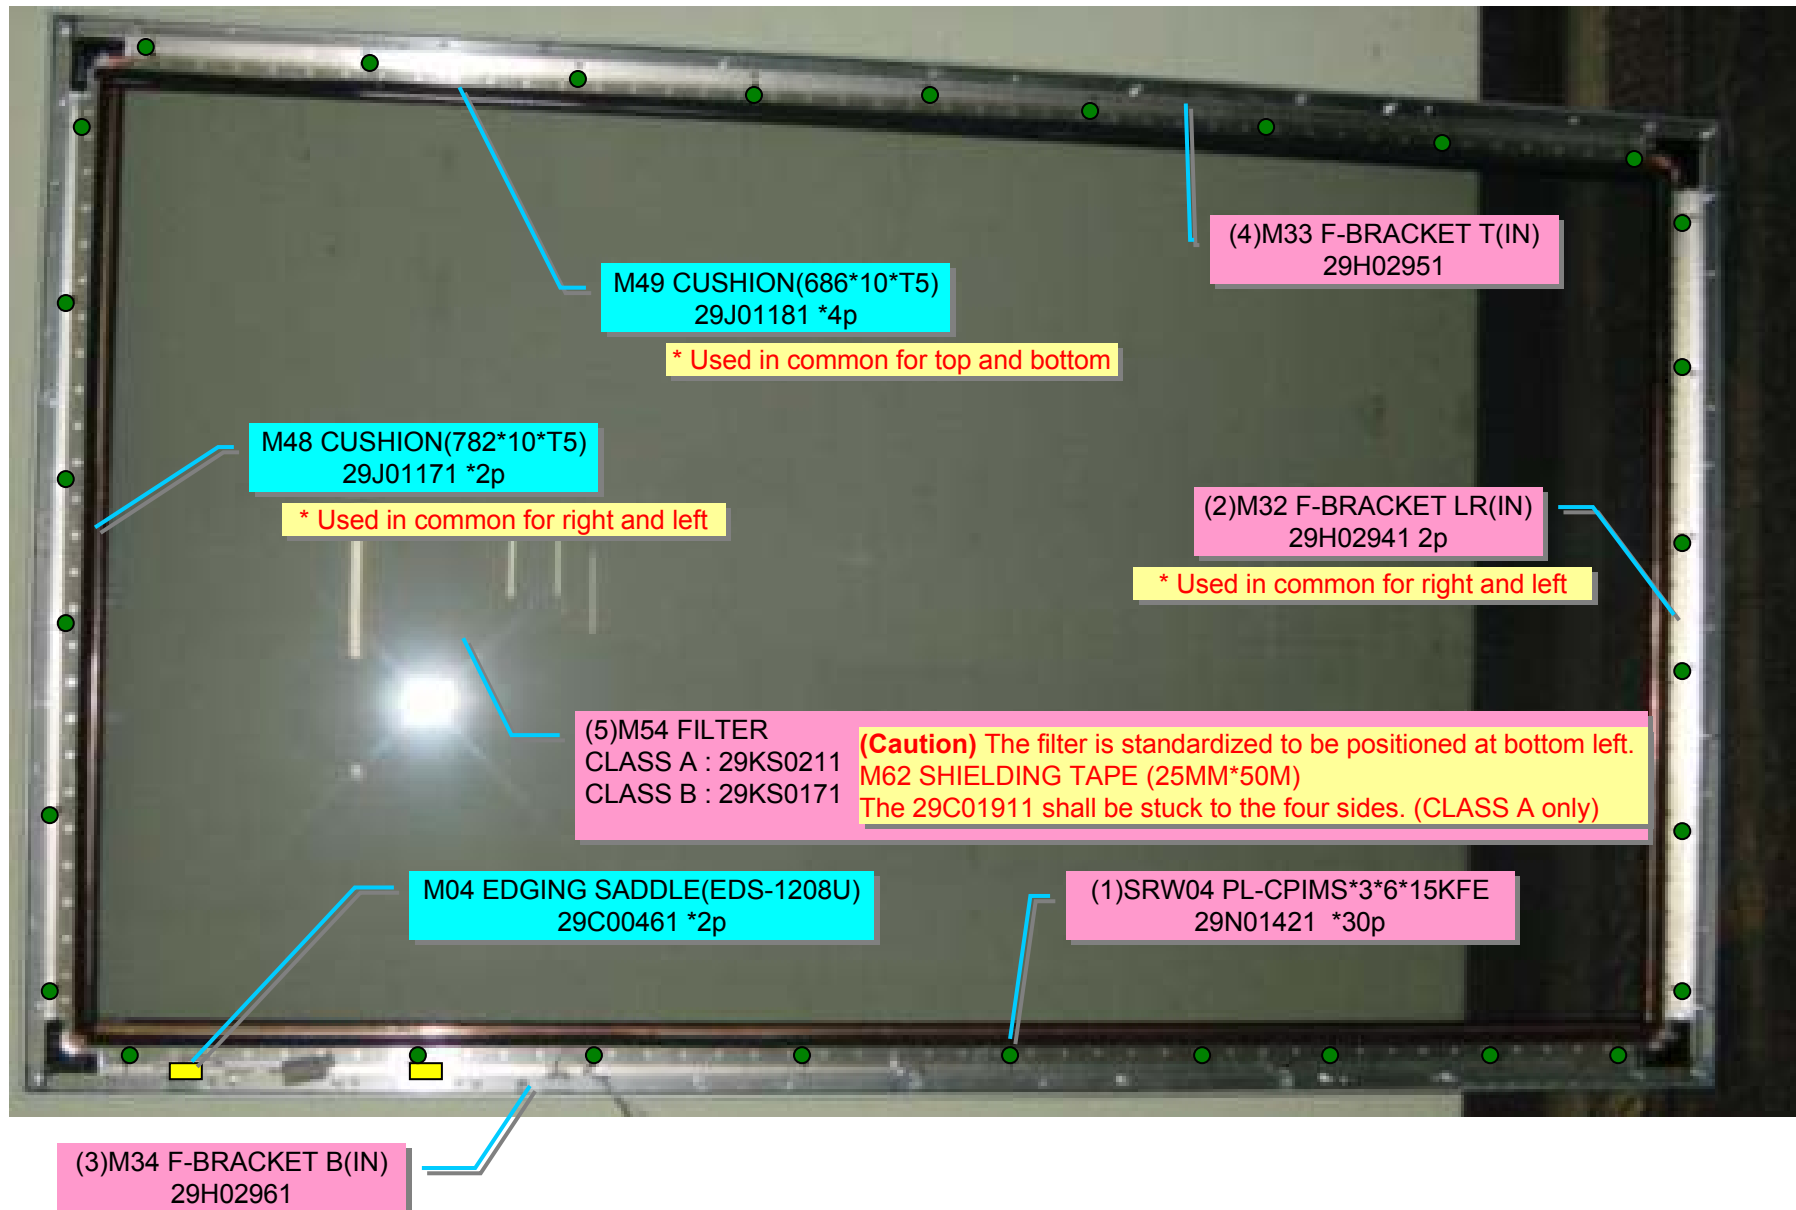

5. PDP

6. F-BRACKET(IN) /FILTER

(Caution) Once the shielding tape and the cushion are removed, they must not be used again because their adhesive strength has been reduced.

7. FILTER(CLASS A)

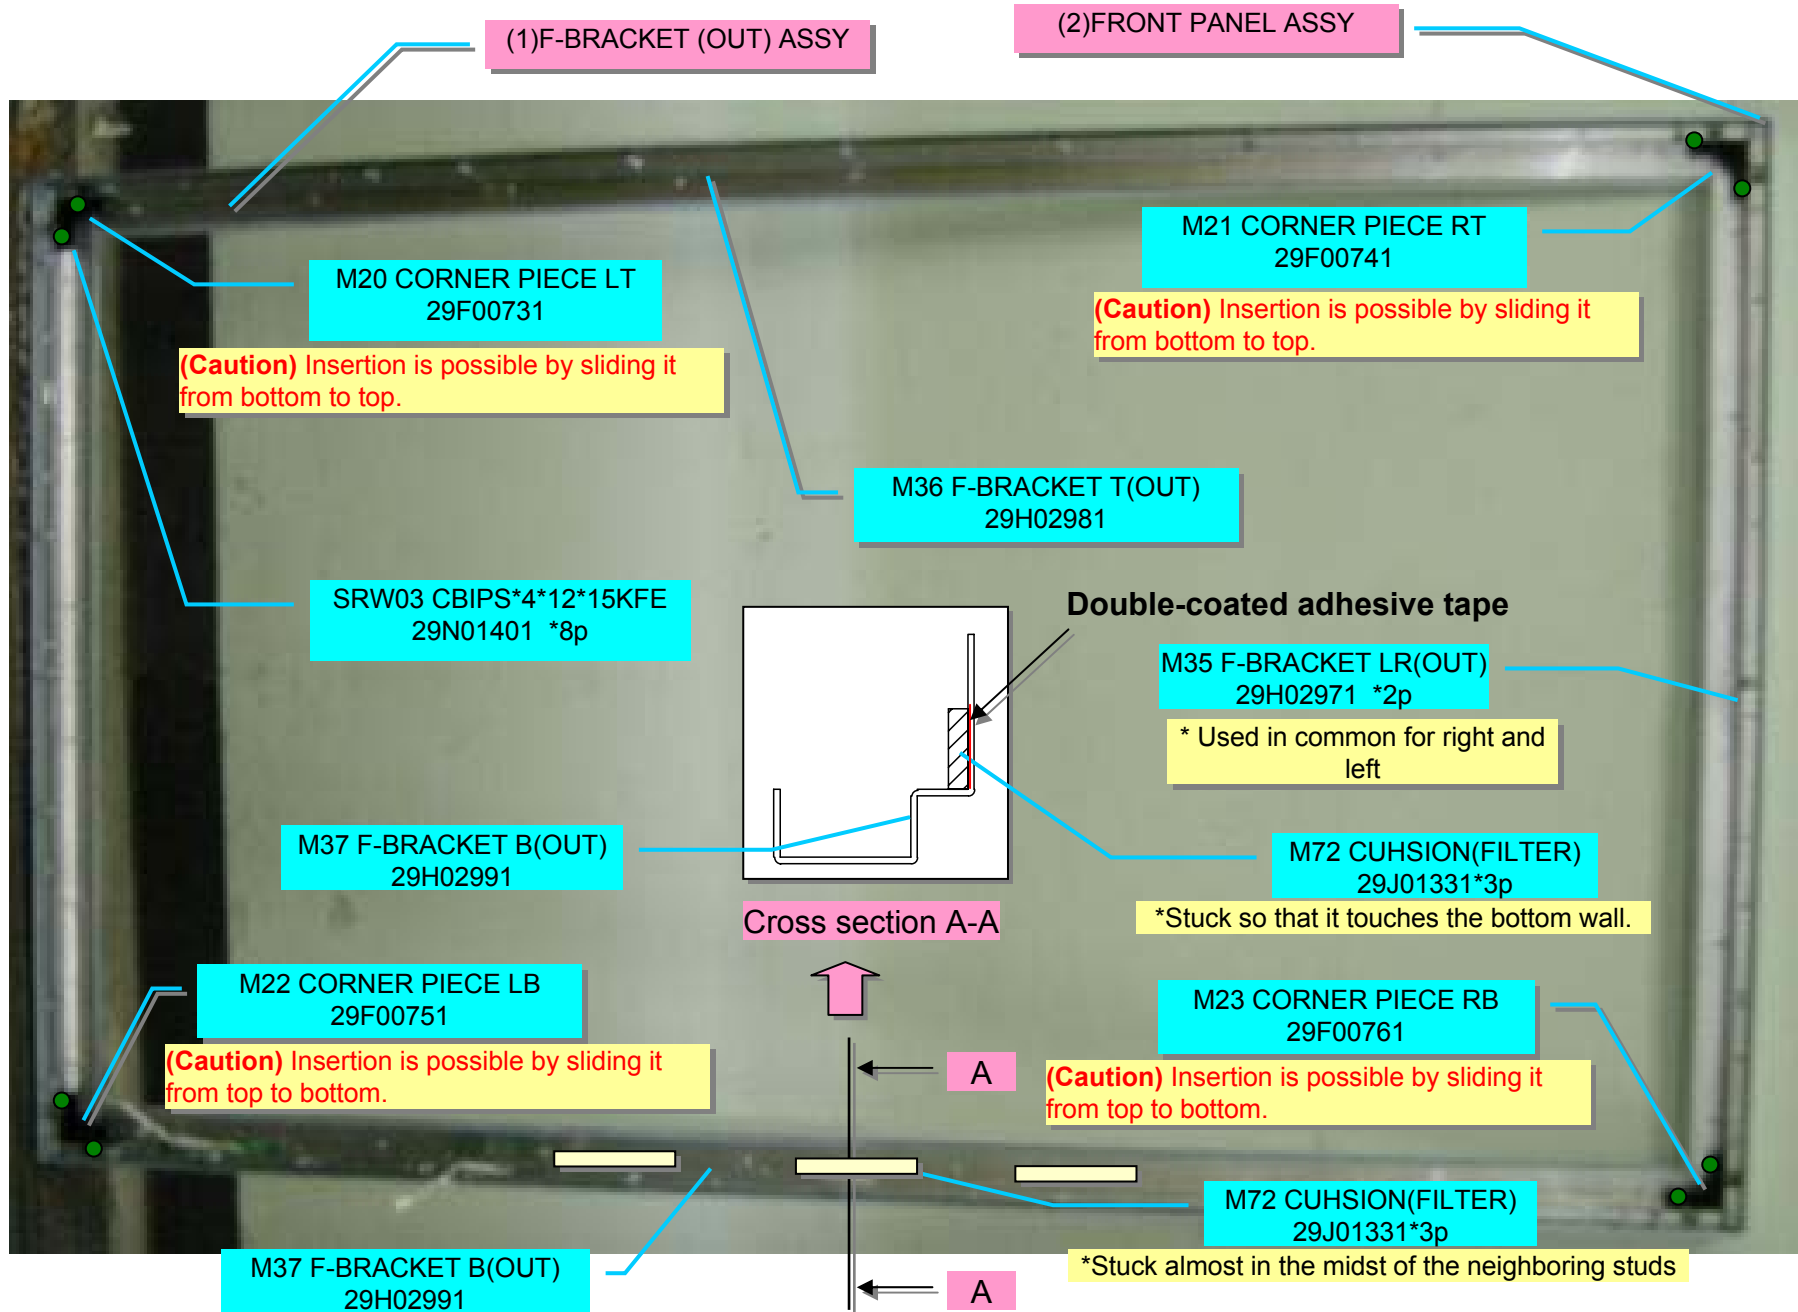

(Caution) No SHIELDING TAPE has been stuck to the service part FILTER. Therefore, in the case of filter replacement, please order the SHIELDING TAPE and stick it as illustrated below.

SHIELDING TAPE

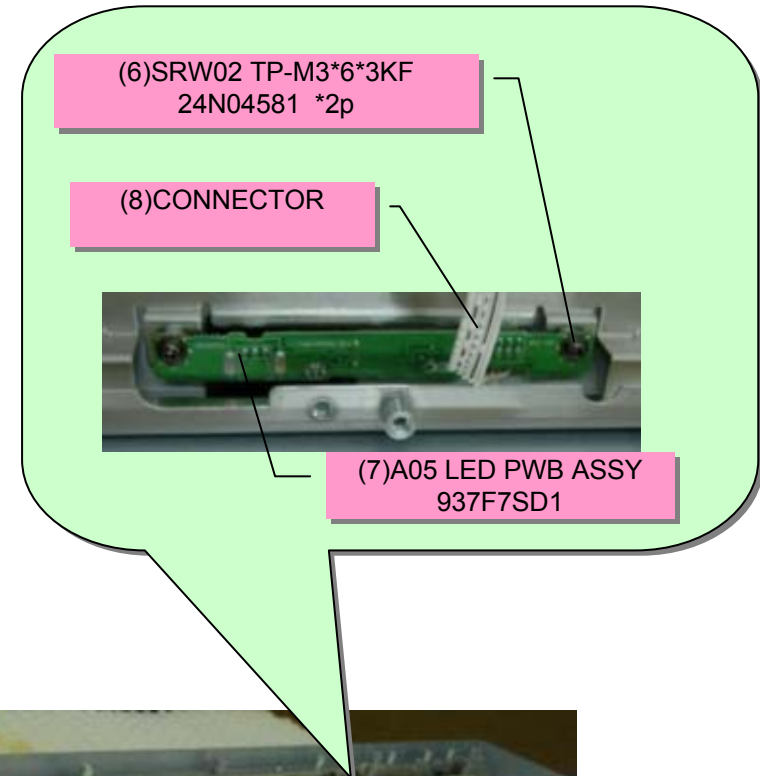

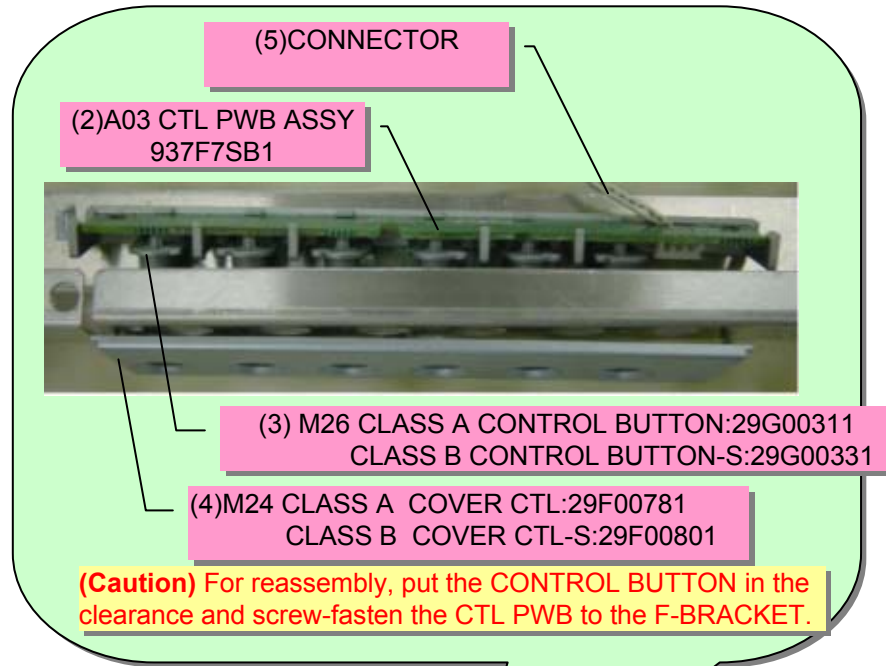

(Caution) Once the shielding tape is removed, it must not be used again because its adhesive strength has been reduced.

8. F-BRACKET(OUT) ASSY

9. LED PWB/CTL PWB/F-BRACKET B(OUT)/COVER CTL/CONTROL BUTTON

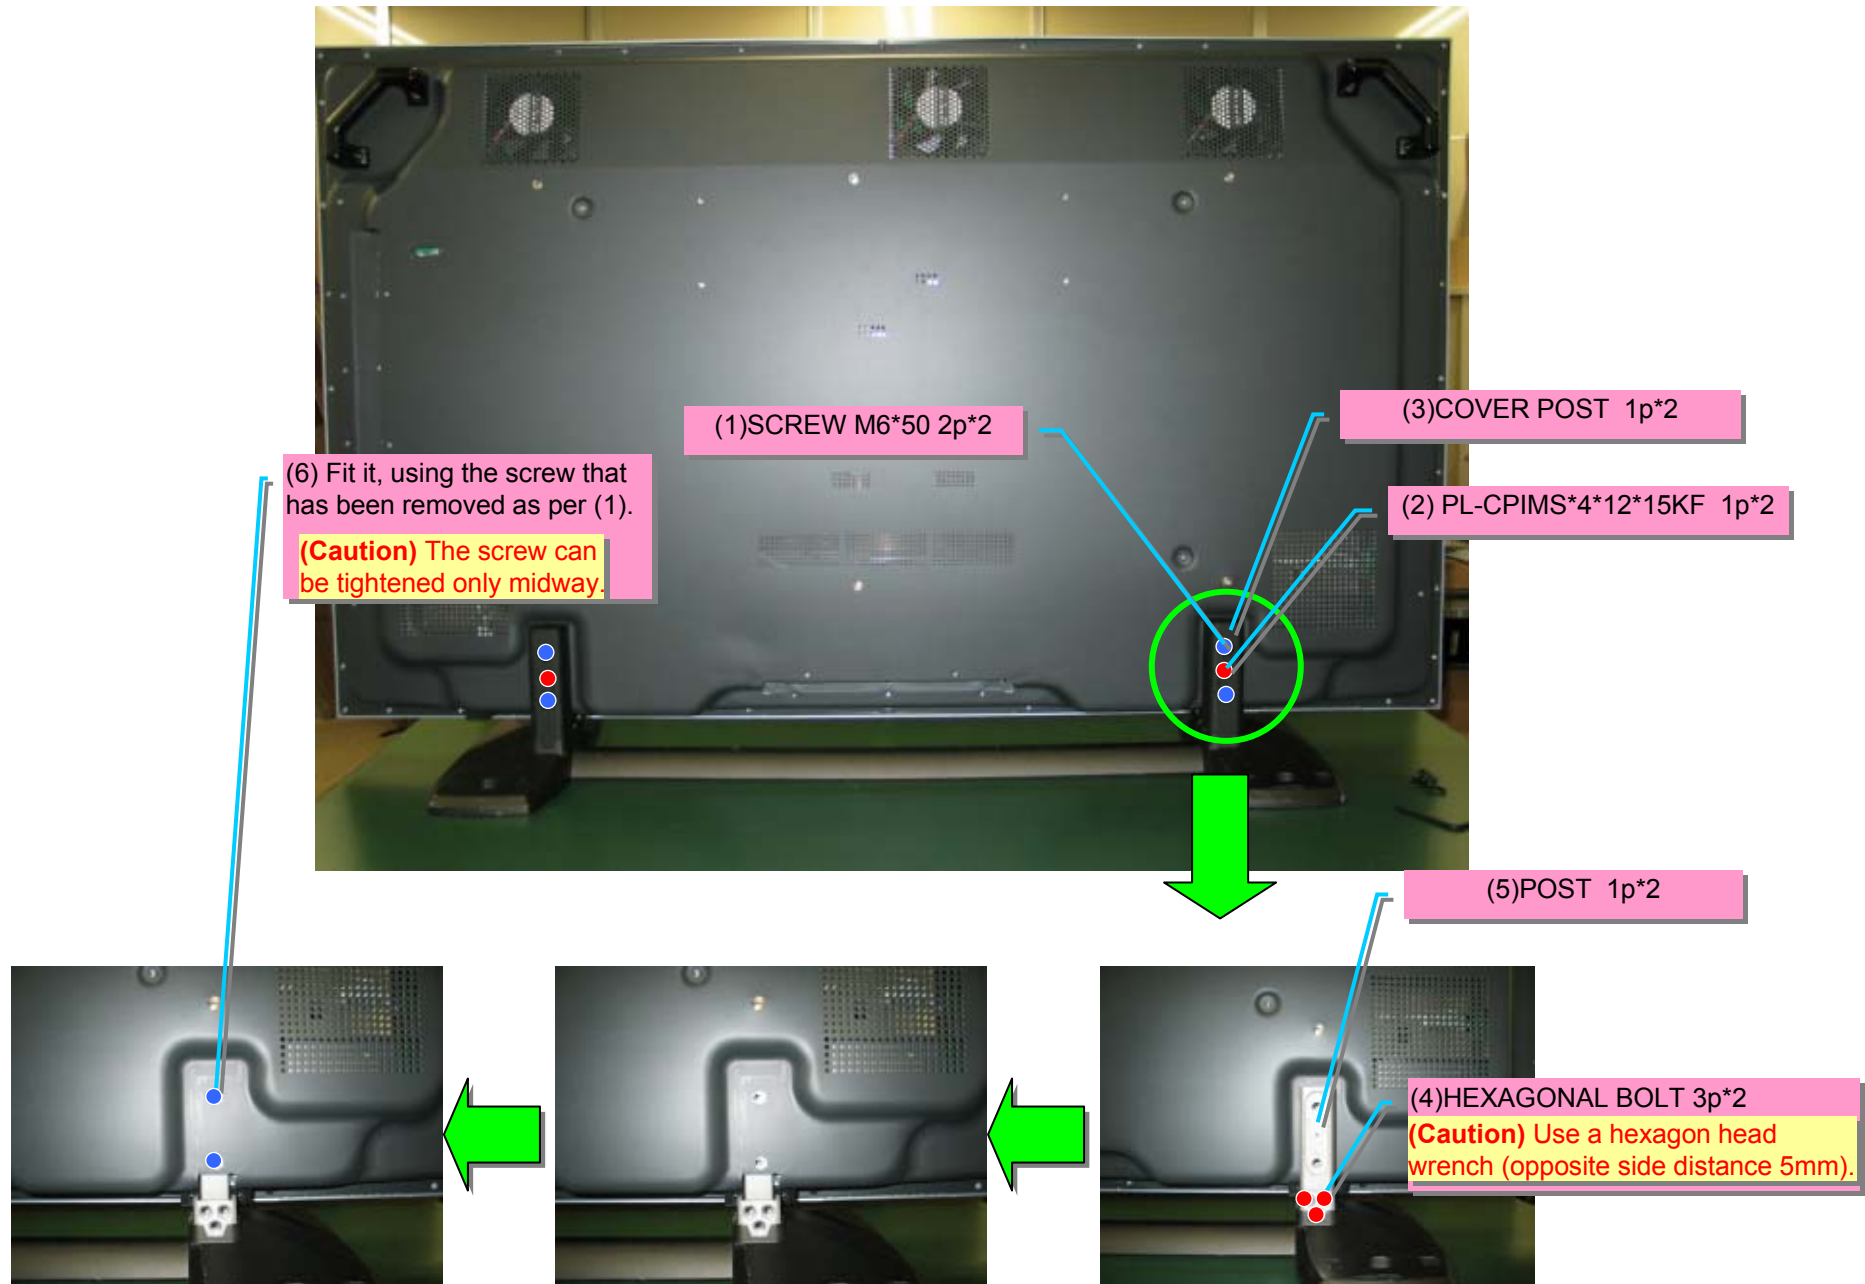

10. FRONT PANEL

(2)M16 CLASS A FRONT PANEL(61XM2) :29D00612
CLASS B FRONT PANEL(61XM2/S):29D00633

11. STAND (modification)

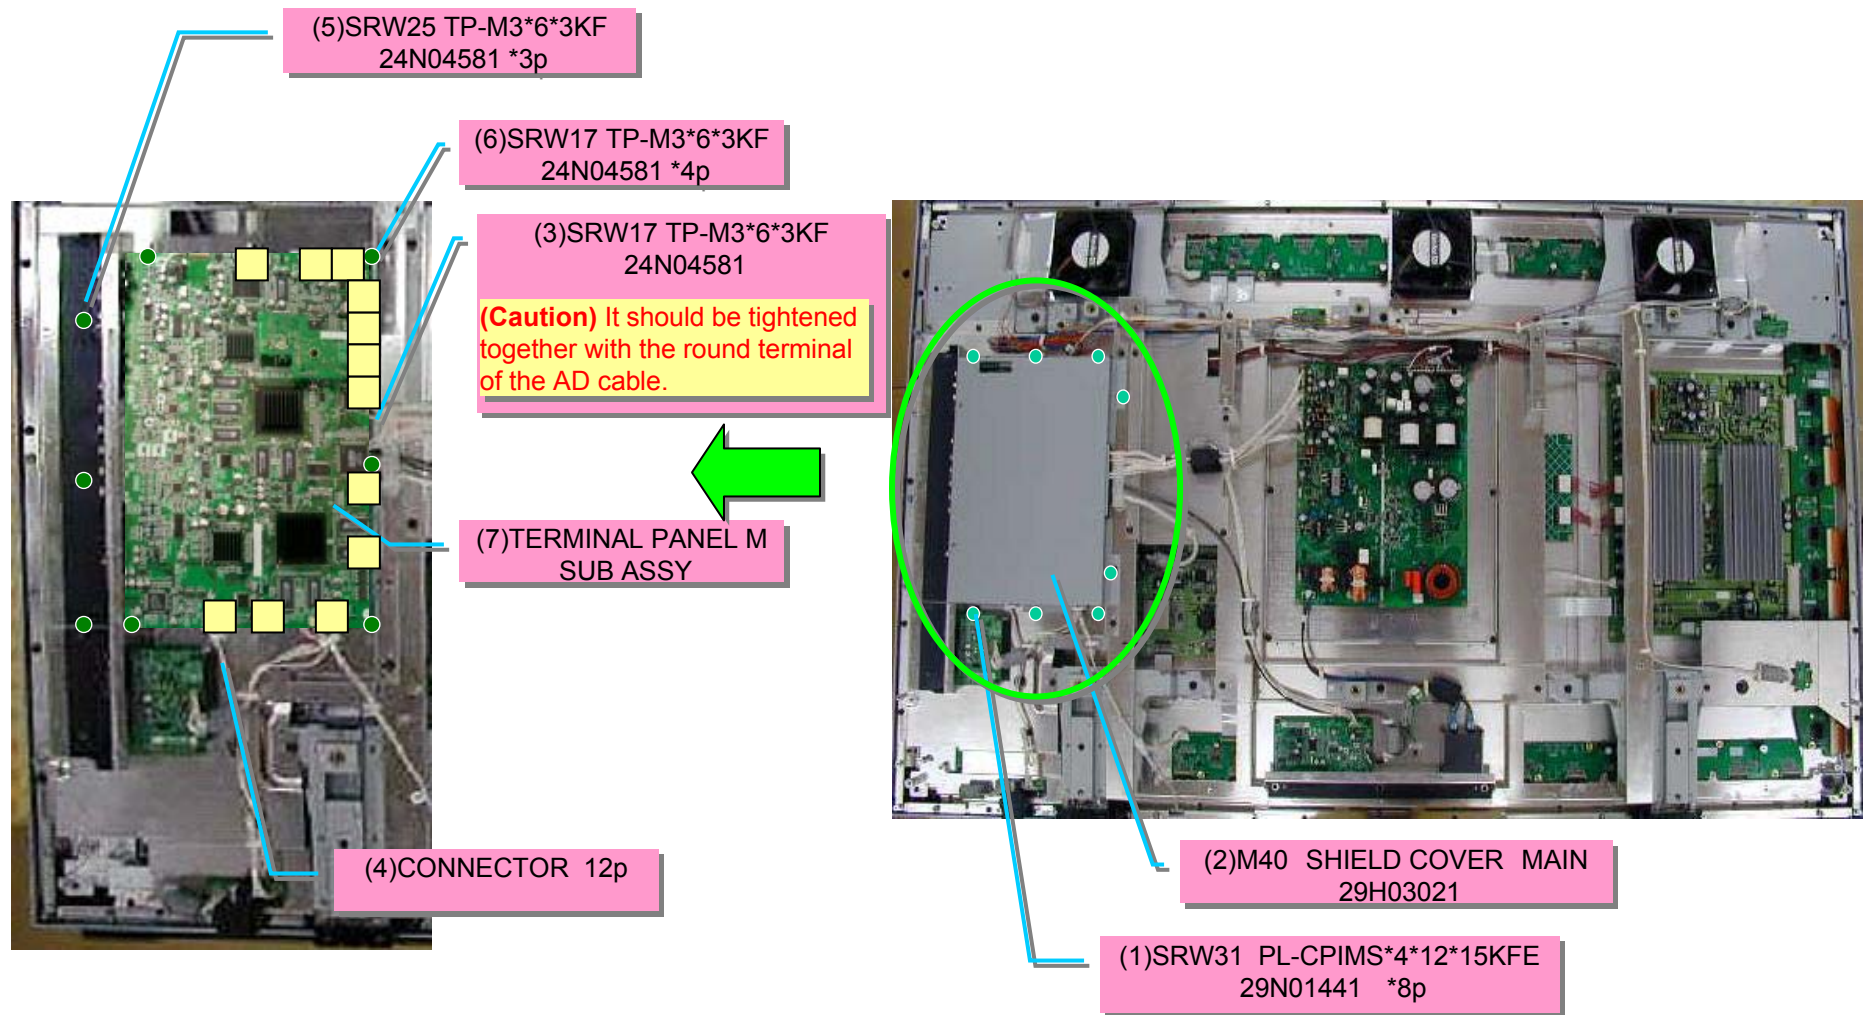

12. BACK COVER (modification)

(Caution) The illustration below shows a case when the STAND has been removed.

13. TERMINAL PANEL M SUB ASSY

14. TERMINAL PANEL M /MAIN PWB

(Caution) Please note that no DS connector is furnished even though the MAIN PWB is ordered.

(6)A01 MAIN 1 PWB ASSY

Refer to Parts List

(Caution) After sticking the TERMINAL SHEET to the TERMINAL PANEL, push the peripheral area of the screw hole to strengthen the adhesion.
(In 3 positions)

(5)M27 SHIELD PLATE
MAIN(42XM3)
29H03541

(2)SRW15 CBIPS*3*8*3KF

17. TERMINAL PANEL B SUB ASSY

18. TERMINAL PANEL B/AUDIO PWB/AC INLET

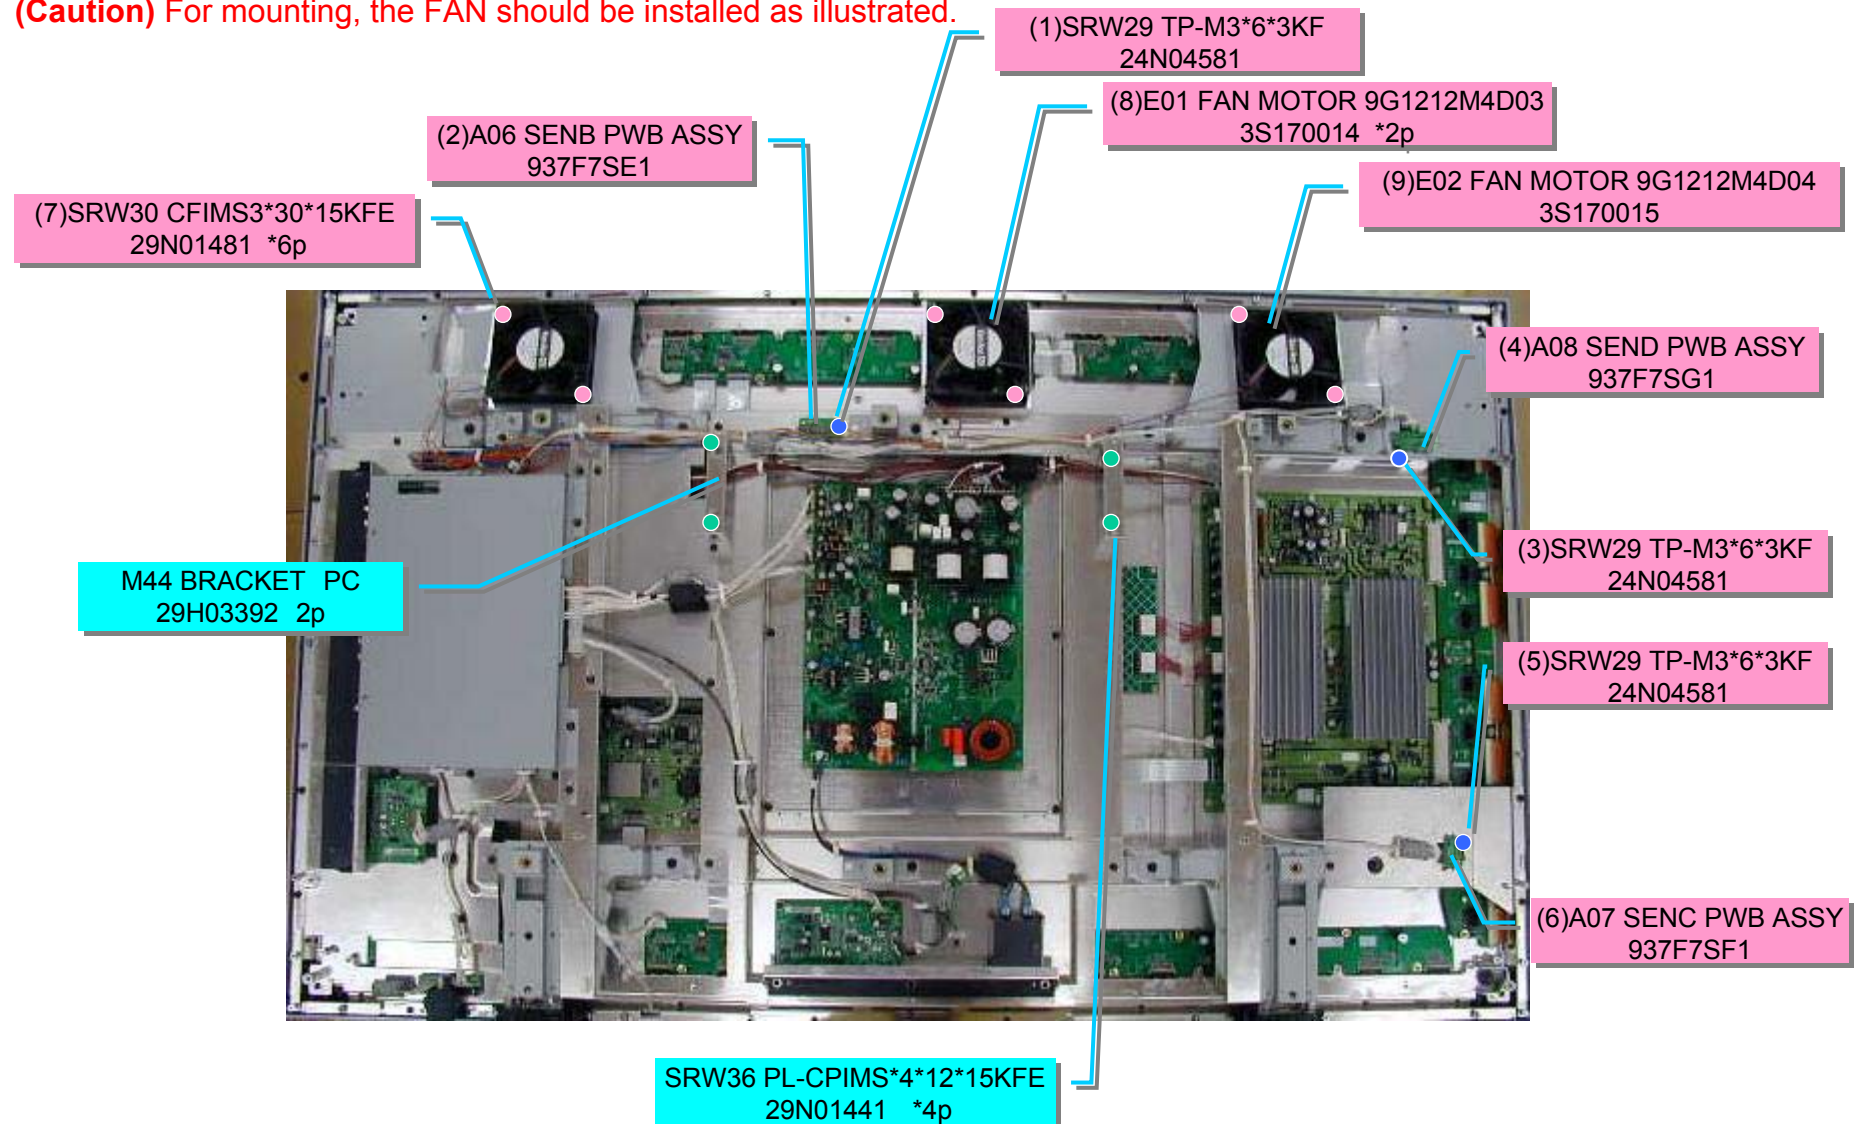

19. POWER UNIT

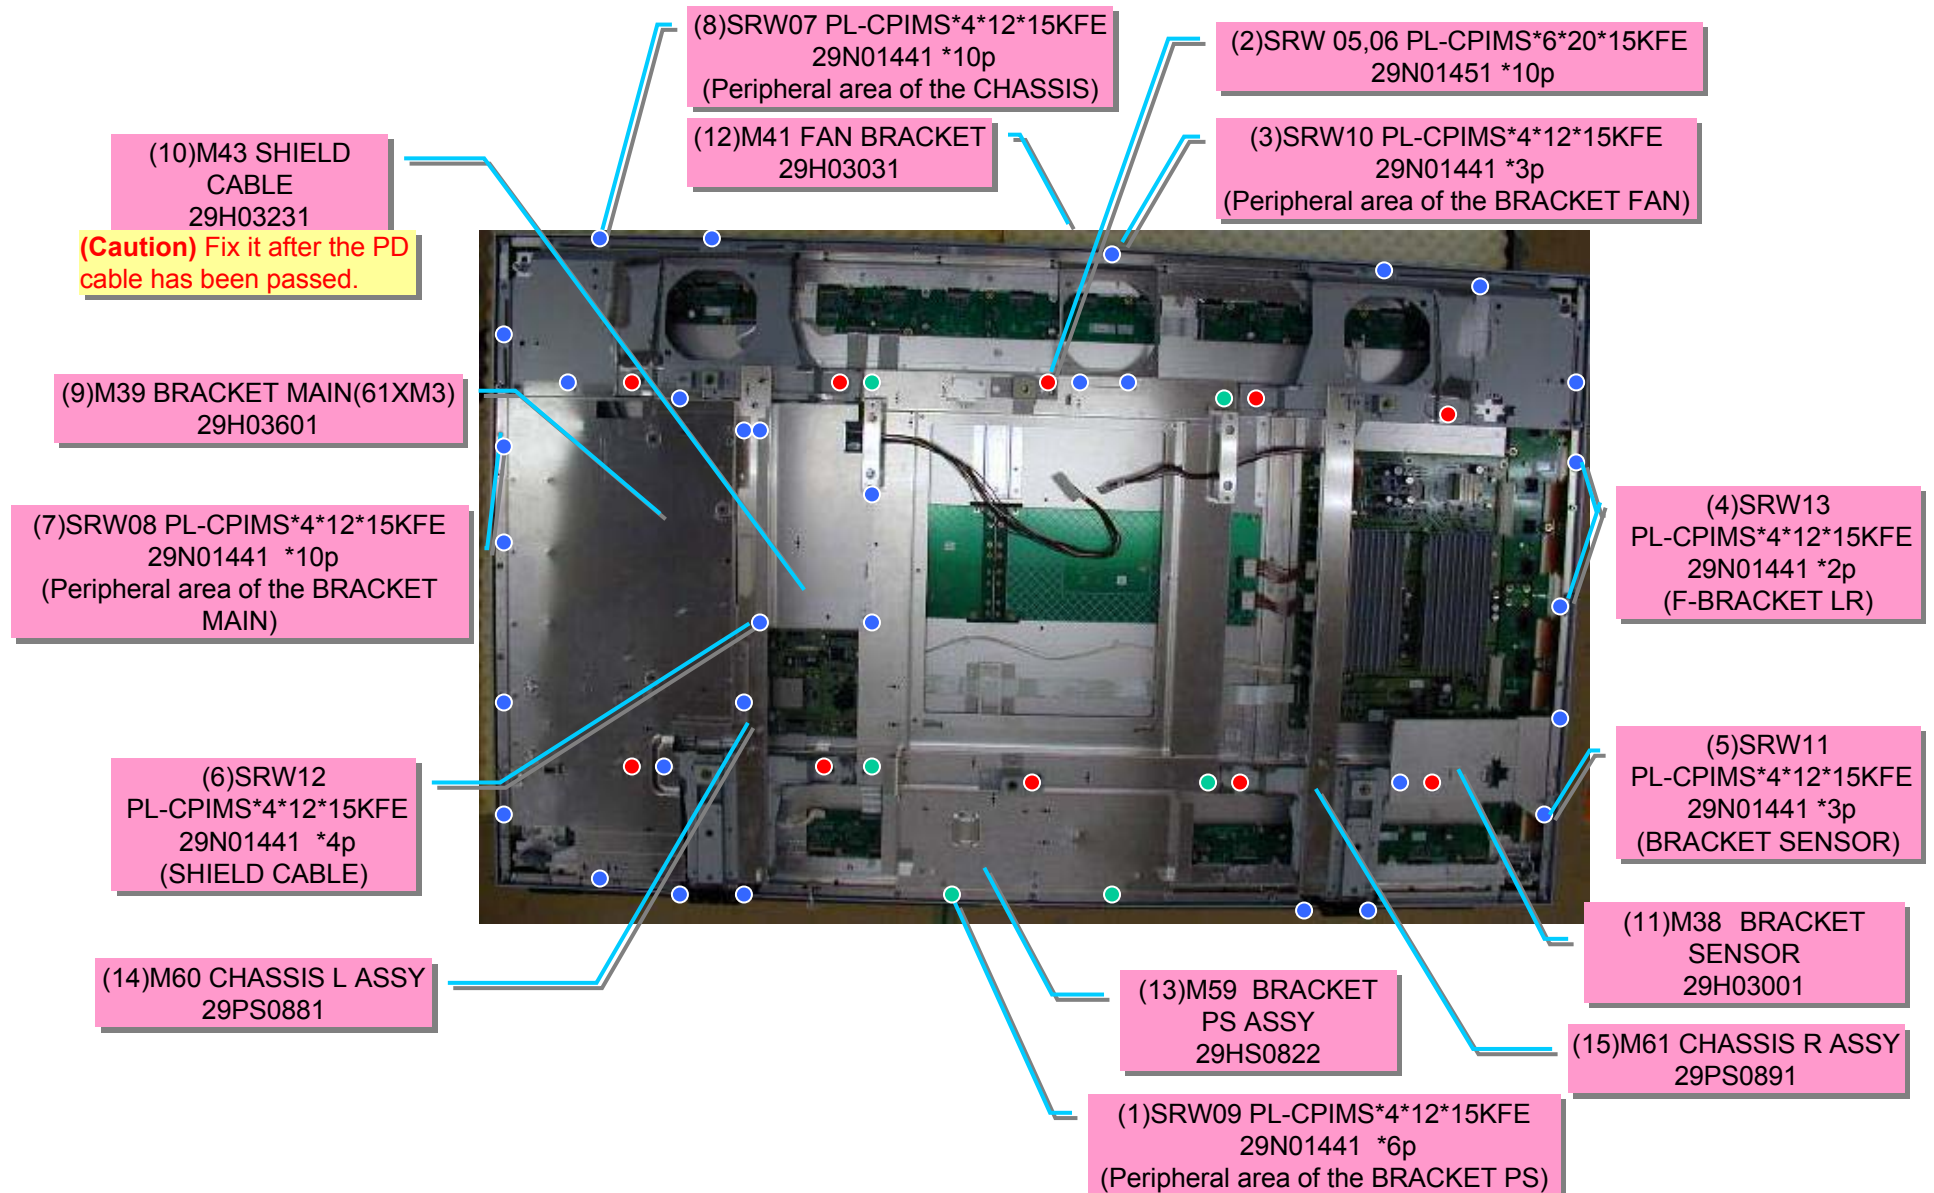

20. SENB PWB/SENC PWB/SEND PWB/FAN

(Caution) For mounting, the FAN should be installed as illustrated.

21. BRACKET/SHIELD

22. WIRE CLAMP

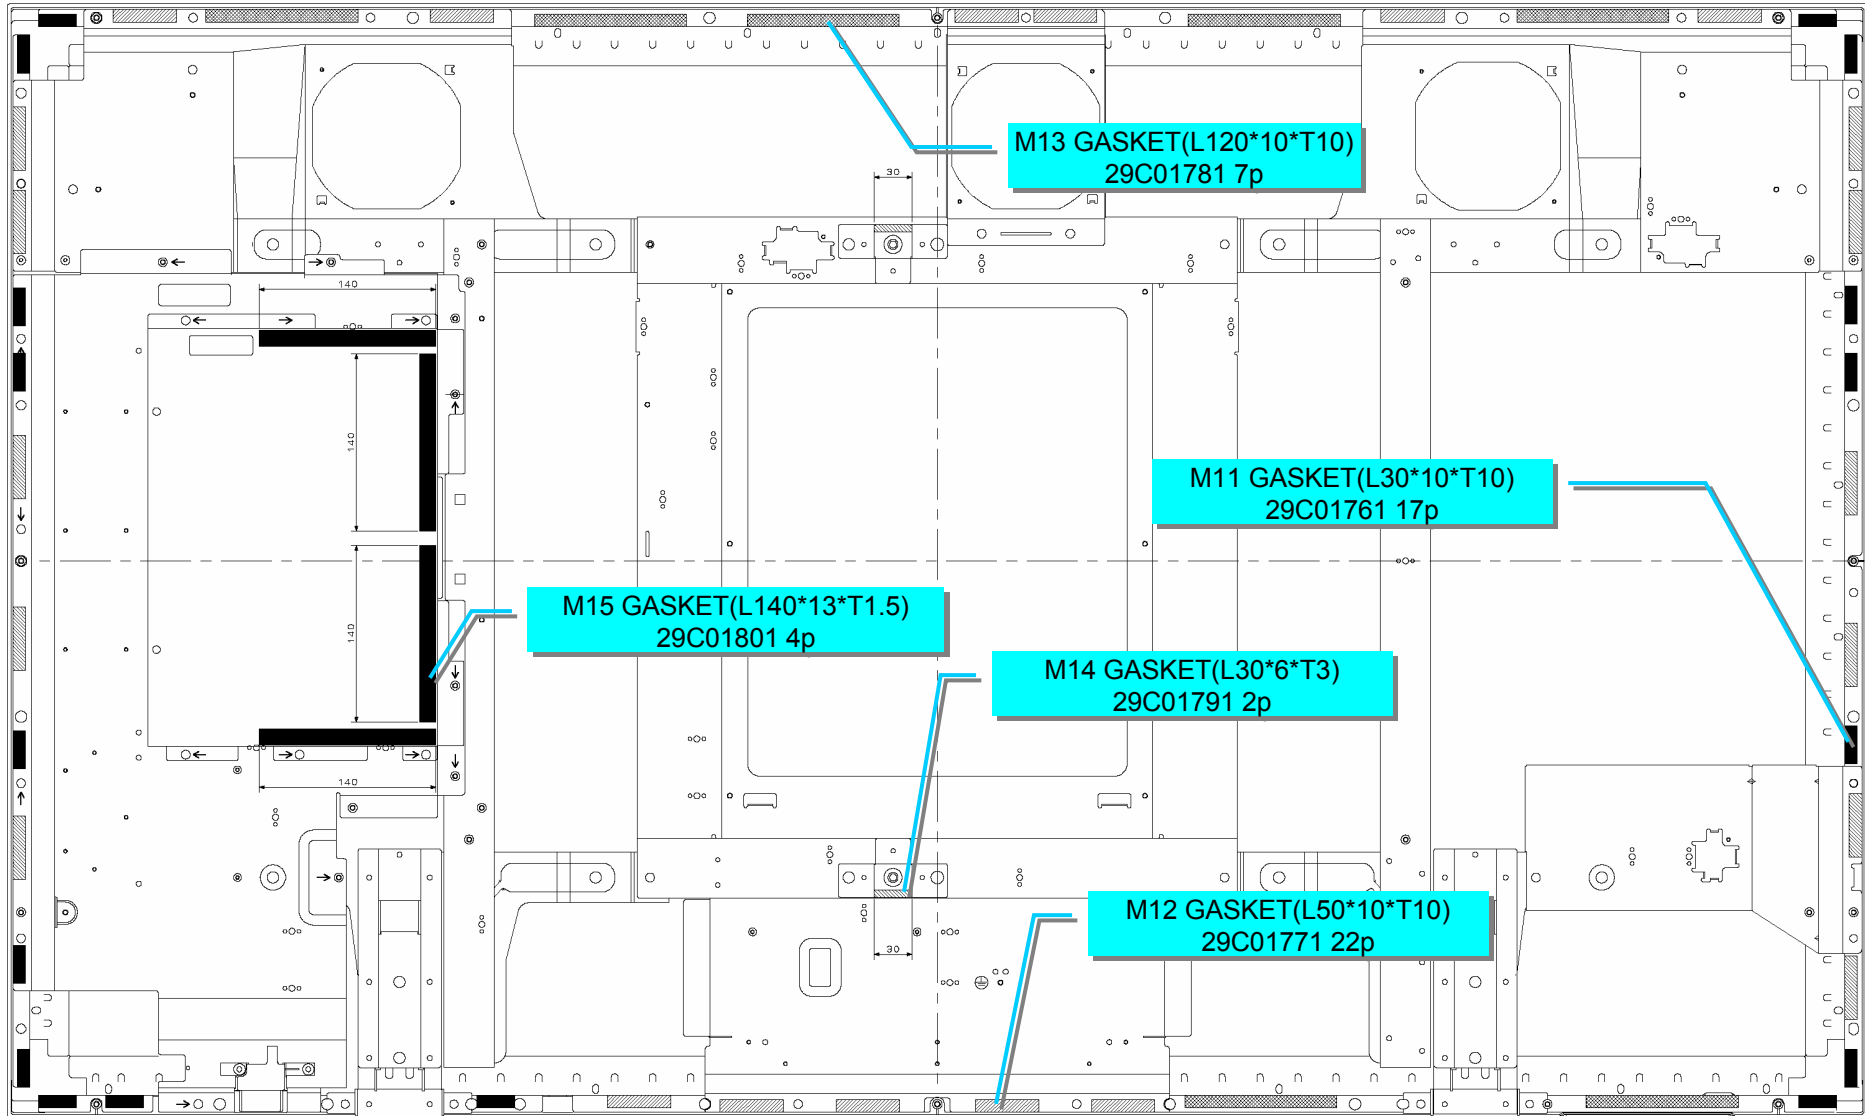

①M04 EDGING SADDLE(EDS-1208U)	29C00461	1p
②M05 CLAMP(LCT-1S)	29C00551	1p
③M64 CLAMP(RLWC-2SV0)	29C01901	34p

④M07 CLAMP(RFCC-625)	29C01721	1p
⑤M01 BUSHING,INSULATOR	24282991	3p
⑥M09 CLAMP(RBWS-5N)	29C01741	2p

23. GASKET(CLASS B)

(Caution) Gaskets are used only for the CLASS B model. (PDP-614MX, PRO-1410HD)

If replacement is intended, the gasket should be carefully stuck without permitting it to protrude from the BACK COVER when this BACK COVER is being mounted.

24. LABELS

(1) Positions of adhesion

Stick the labels in the positions on the back cover illustrated below. Dimensions indicated are approximate figures. However, the presence of bends and air bubbles shall be reduced to a minimum.

◇ Adhesion of the CCC label

Stick the furnished CCC label approximately to the position indicated on the drawing of NAMEPLATE (61X***).

PARTS LIST

Use this parts list with the contrast table[for PDP-614MX, PRO-1410HD]. (Refer to P6-1)

Notes:

1. Parts orders must contain model name, parts number and parts name.
2. When you place an order for spare parts, please refer to the respective service manual and mention the right parts number on your P.O. sheets
3. The letters NSP in the table indicate non-service parts.
4. Please refer to METHOD OF DISASSEMBLY or PACKAGING of service manual about a parts layout.

*1 : Version number of the Board Assy (PKG) is written down in the Board Assy itself.

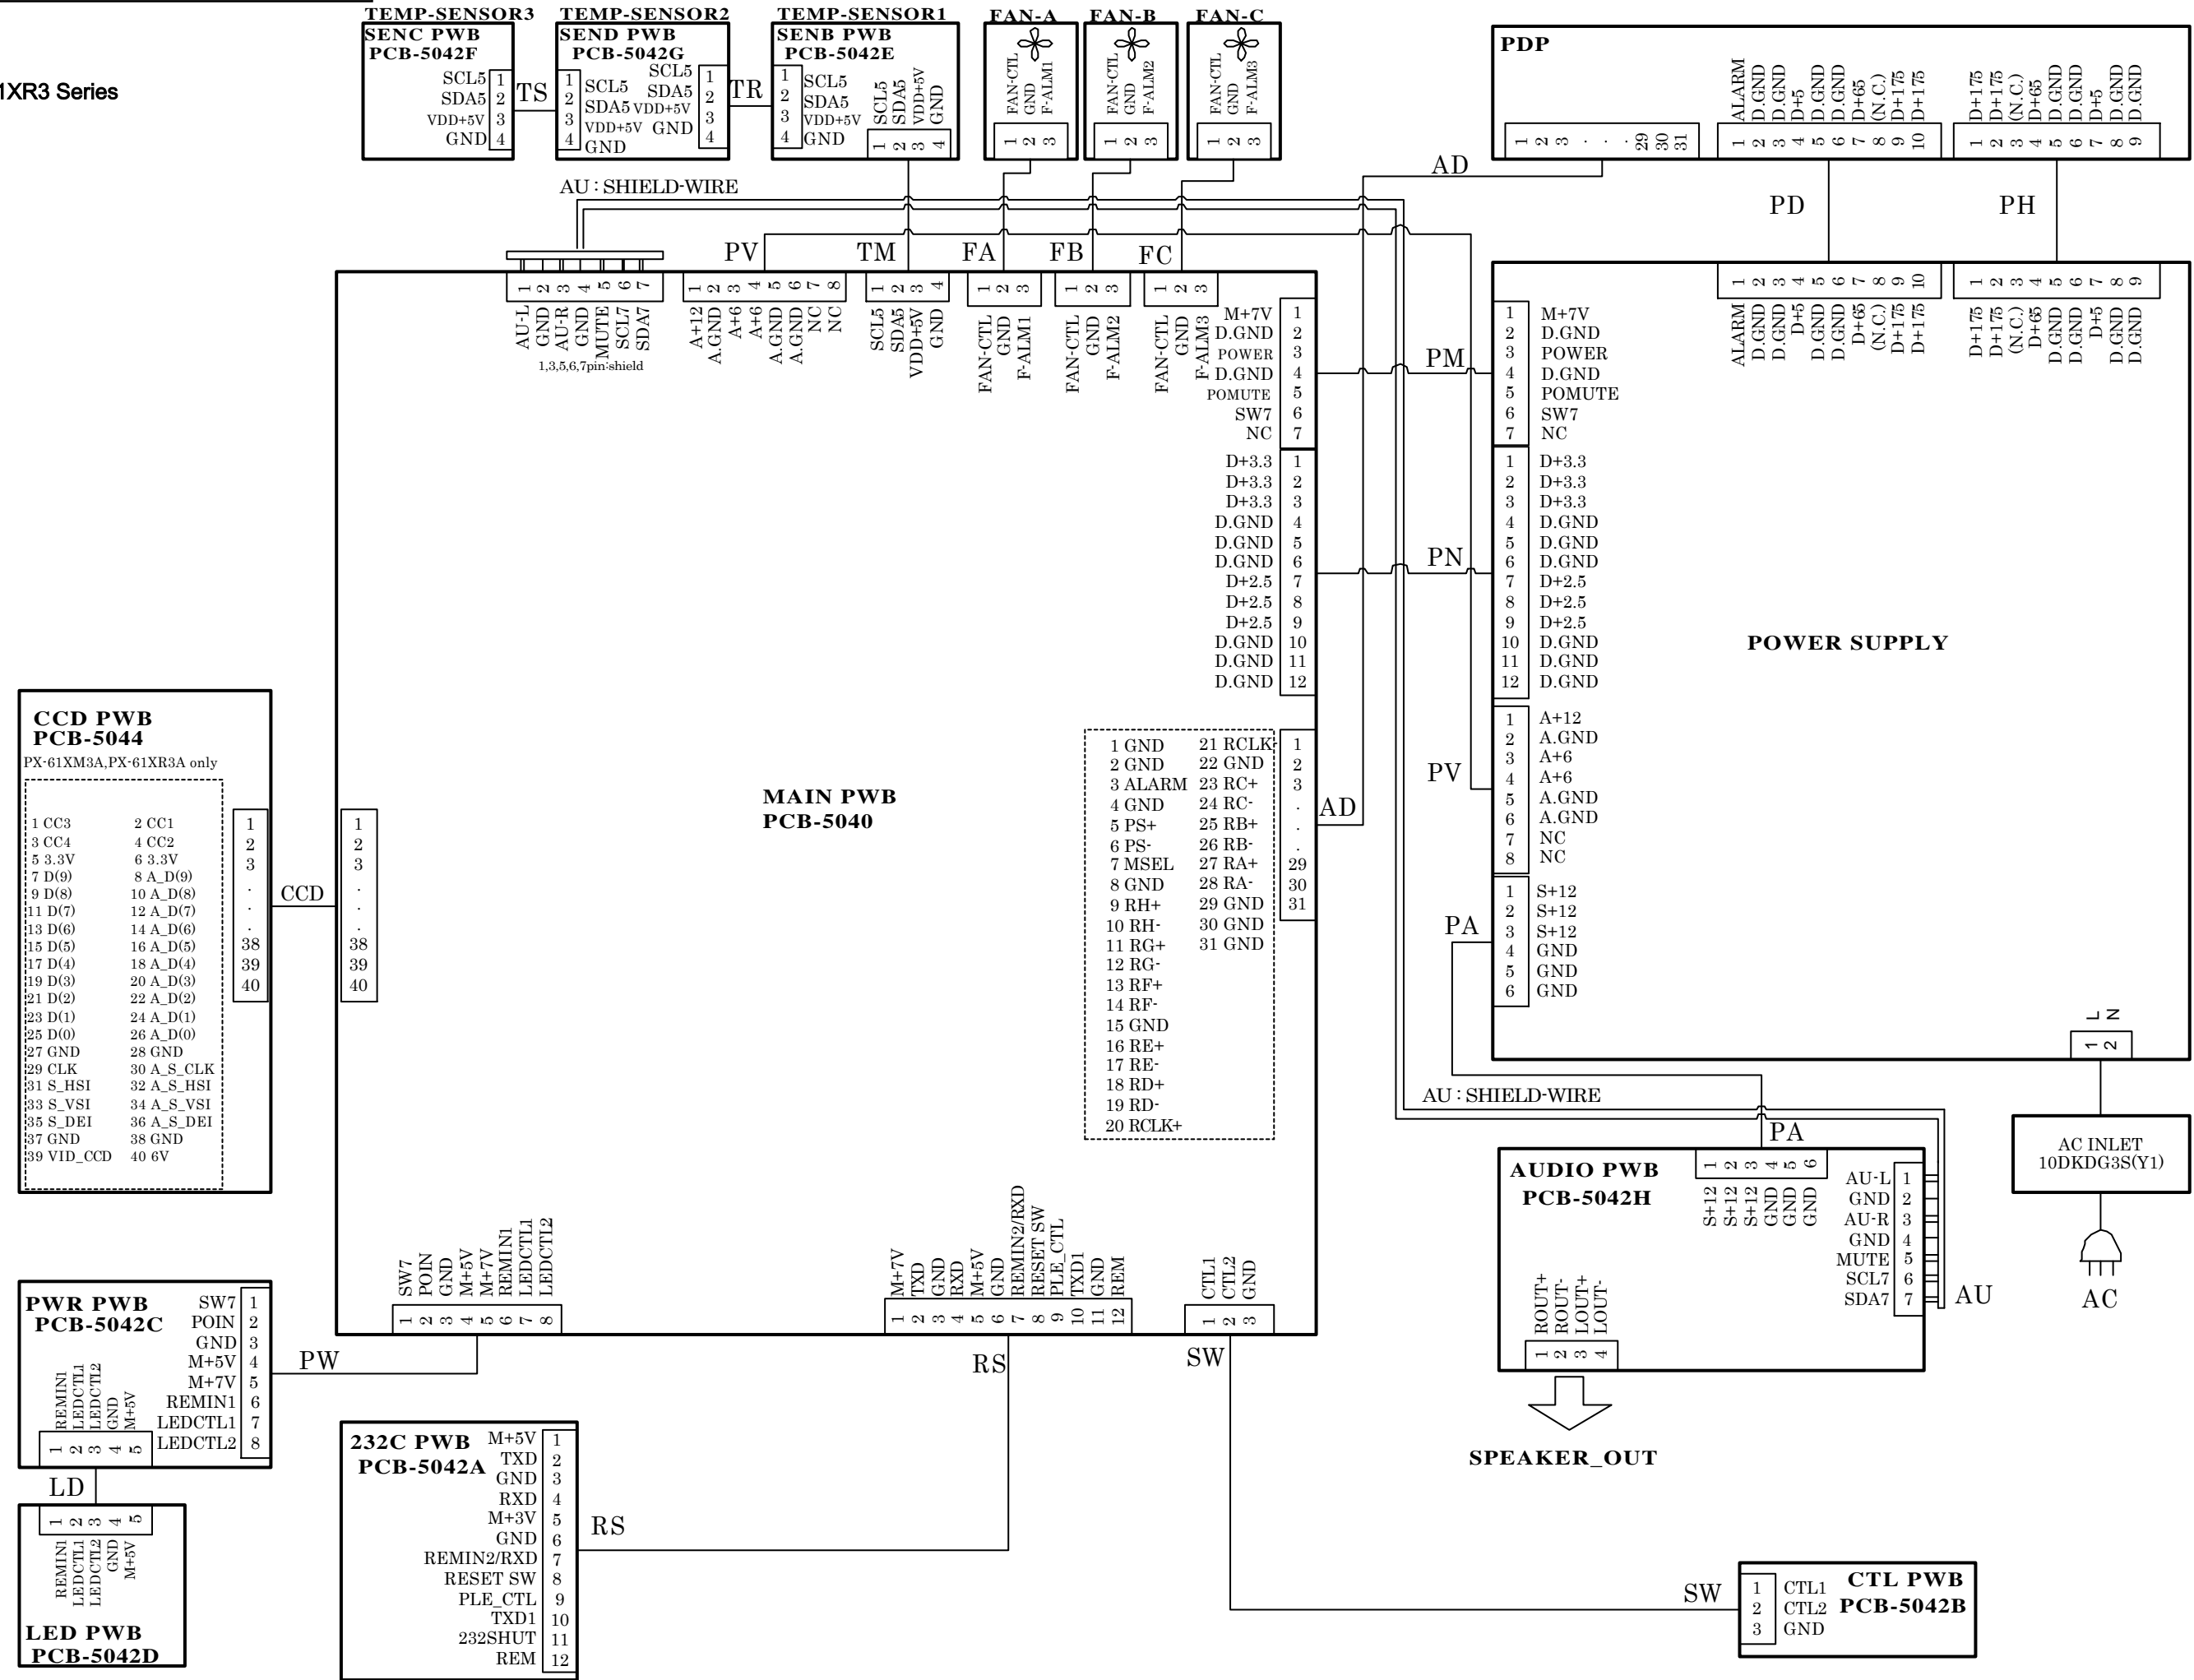

Board ASSY interchangeability list (in PDP-NP61C2MF01)

Note: In the Board ASSY (PKG) replacement, You can exchange it in a version of high rank than a replacement target version besides a compatible version.
Digital PKG follows the following list, and exchange it.

Digital PKG PKG61C2C1	Replacement Target Version	Compatible Version
	01A - 00, 01, 02, 03 01B - 03, 05, 07, 11 02A - 03, 02B - 03, 05, 07, 11 02C - 10, 17, 21 03B - 13, 15, 25 03C - 23, 25, 27 04C - 23, 25, 27 04D - 25, 27 05C - 25, 27 05D - 25, 27	Exchange it for 05C-27 (9S899791) or 05D-27 (9S899731).
	01B - 04, 06, 08, 12 02B - 04, 06, 08, 12 02C - 18, 22 03B - 14, 16 03C - 24, 28 04C - 24, 26, 28 04D - 26, 28 05C - 26, 28 05D - 26, 28	Exchange it for 05C-28 (9S899792) or 05D-28 (9S899793).

PX-61XM3/61XR3 Series

CONNECTOR PIN EXPLANATION

PX-42VM5/42VP5/42VR5/42XM3/42XR3/50XM4/50XR4/61XM3/61XR3 Series											
(Caution) The operating voltages specified below are used in common irrespective of the presence of signals. In this case, however, part of the operating voltages (red characters) may change according to the signal conditions when the main power supply is turned on (POWER button ON). Status of LED lighting: ★ for lighting in green, ★★ for unlighting, and ★★★ for lighting in red.											
Basic operation (Numerical unit: Vdc; except for the case when units are individually indicated)											
Name	Pin No.	Pin name	Function	AC power ON (Power cord connected to the wall outlet) ★★	Main power ON (POWER button ON) ★		Power management ★★	Standby ★★★	Main power OFF ★★	AC power OFF (Power cord pulled out of the wall outlet) ★★	Signal direction
